

# **HYDRONIC CASSETTES**

## **INSTALLATION OPERATION AND**

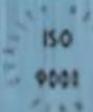

## **SERVICE MANUAL**

### **PCE(F)2-V/P~AC SERIES**

**V ~ 2 pipe**  
**P ~ 4 pipe**

**HARDI**  
Heating, Air-conditioning & Refrigeration Distributors International  
**PROUD MEMBER**  
2012 - 2013

## INVESTING IN QUALITY, RELIABILITY & PERFORMANCE.

### ISO 9001 Quality

Every product is manufactured to meet the stringent requirements of the internationally recognized ISO 9001 standard for quality assurance in design, development and production.

### World Leading Design and Technology

Equipped with the latest CAD/CAM computer aided design and manufacturing technology, our factories in China and Thailand produce over 2,000,000 air conditioning units each year, all conforming to the highest international standards of quality and safety.

### CE SAFETY STANDARDS

All products conform to the Certificate Europe directives (Machinery Safety, Electromagnetic Compatibility and Low Voltage), as required throughout the European Community, to guarantee correct standards of safety.

### The Highest Standards of Manufacturing

In order to guarantee the very highest standards and performance, we manage every stage in the manufacturing of our products. Throughout the production process we maintain strict control, originating with our extensive resources in research and development through to the design and manufacture of almost every individual component, from molded plastics to the assembly of units and controllers.

### WEEE Mark

All products conform to the "WEEE" directive to guarantee correct standards of environmental solutions.

### Quality Controlled from Start to Finish

Our highly trained staff and strict quality control methods enable us to produce products with an exceptional reputation for reliability and efficiency, maintained over many years. As well as full CE certification and ISO 9001, several products have UL / ETL safety approval in the USA and Canada, ROHS compliance for Europe, giving you the confidence of knowing our company is the right choice when selecting air conditioning equipment.

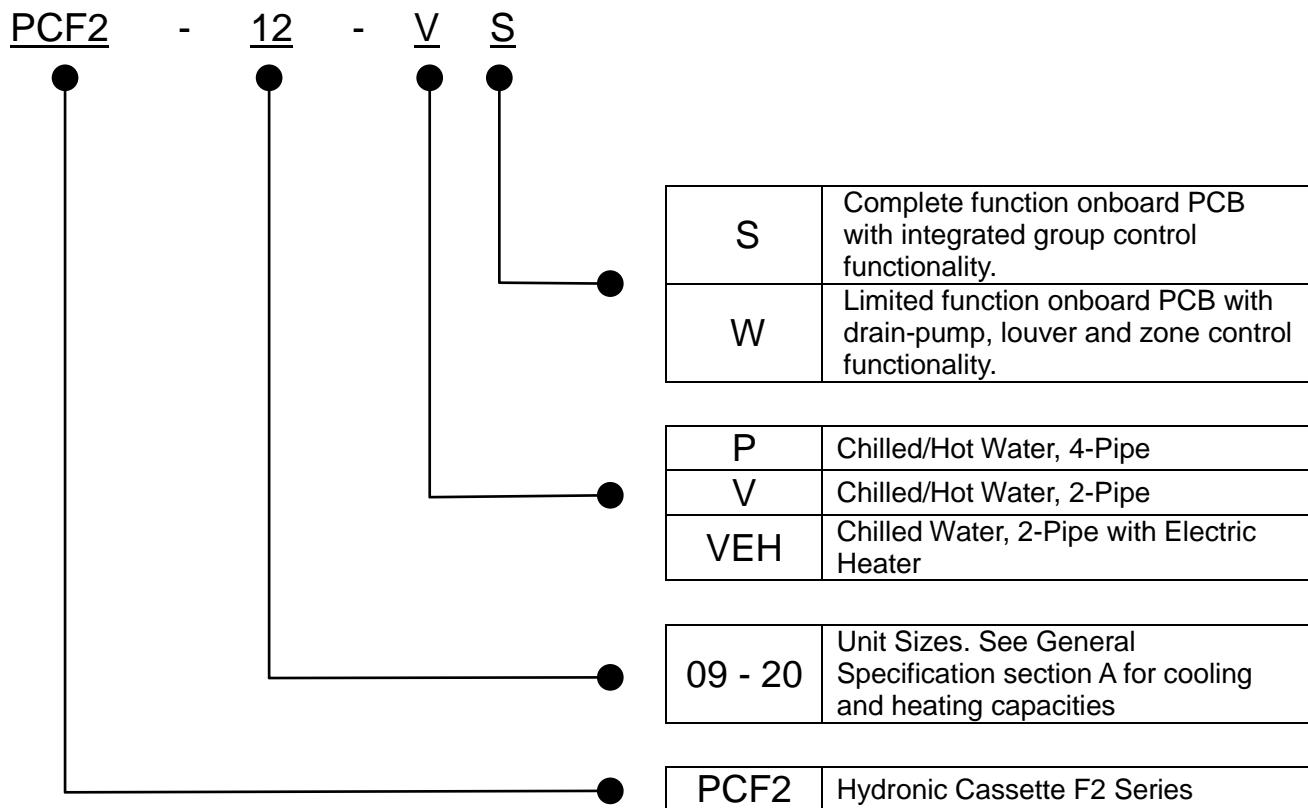

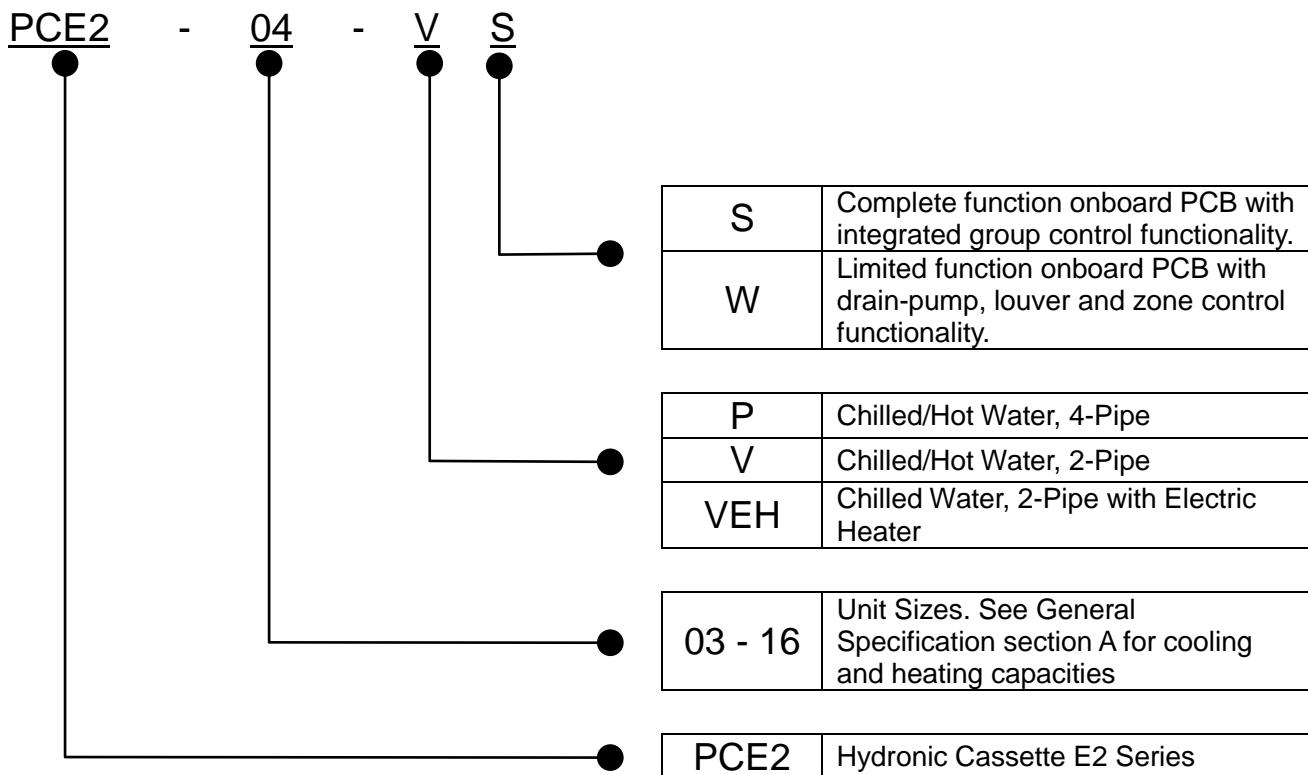

**ALWAYS MAKE SURE THIS MANUAL REMAINS WITH THE WATER CASSETTE. READ THIS MANUAL BEFORE PERFORMING ANY OPERATION ON THE WATER CASSETTE.**

1."e" refers to technical information listed on the Eurovent website. Eurovent testing conditions:

**a. Cooling mode (2-pipe):**

- Return air temperature: 27C DB/ 19C WB.
- Inlet/ outlet water temperature: 7C/ 12C.
- Water flow-rate: variable.

**b. Heating mode (2-pipe):**

- Return air temperature: 20C.
- Inlet water temperature: 50C.
- Water flow-rate: same as 2-pipe cooling.

		Net Weight		Kg	30	30	50	52	50	

1."e" refers to technical information listed on the Eurovent website. Eurovent testing conditions:

**a. Cooling mode (4-pipe):**

- Return air temperature: 27C DB/ 19C WB.
- Inlet/ outlet water temperature: 7C/ 12C.
- Water flow-rate: variable.

**b. Heating mode (4-pipe):**

- Return air temperature: 20C.
- Inlet/ outlet water temperature: 70C/ 60C.
- Water flow-rate: variable.

## A.2. Coil Data

### A.2.1. 2-Pipe Systems

## A.5. Valve Information

### Model Definitions

#### SK-DFPS-A-005a:

3-way ball valve with  $\frac{3}{4}$ " inch connectors and on/ off motorized actuator

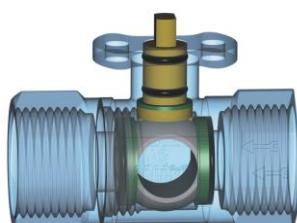

#### SK-DFPS-A-005b:

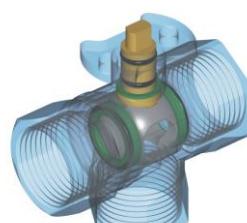

2-way ball valve with  $\frac{3}{4}$ " inch connectors and on/ off motorized actuator

Specifications	Materials
Medium: Cool/Hot water or 60% glycol Caliber: DN15, DN20, DN25, DN32 Structure: Two way or Three way Operating Mode: On/Off or 3-point control (24VAC) Power Supply: AC110V, AC220V, AC24V etc. Power Consumption: 6W (during valve position change) Running Times: 15 sec. Pipe Fitting: NPT internal thread	Body: Forged brass, nickel plated Ball: Chrome plated brass Stem: Brass Seats: Fiberglass reinforced Teflon PTFE Seal: 2 EPDM O-rings, lubricated Pressure Rating: 2MPa Media Temp. Range: 34°F to 203°F (1°C to 95°C) Max. Differential Pressure: 1MPa Protection Grade: IP65 Types: 2-way Valve, 3-way Valve (base)

Structure Schematic of Valve Bodies

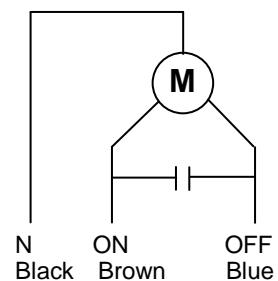

2- way Valve

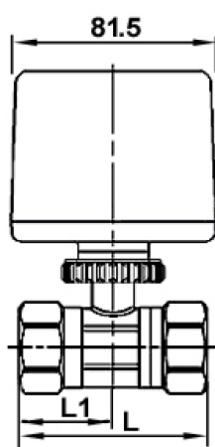

3- way Valve (base)

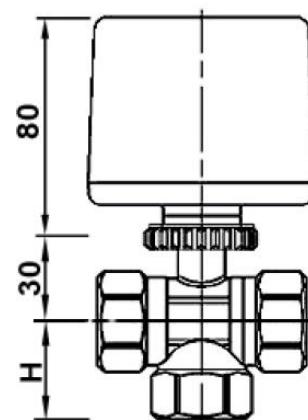

Wiring Diagrams

### Dimension

2- way Valve

3- way Valve (base)

## B. Safety Precautions

- When installing or performing maintenance or servicing the air conditioning equipment, observe the precautions stated in this manual, in addition to those stated in the labels attached around the unit.
- Ensure all local and national safety codes, laws, regulations, as well as general electrical and mechanical safety guidelines are followed for installation, maintenance and service.
- The appliance is for indoor use only.
- Ensure the correct mains supply, with respect to the rating label on the unit, is used.
- Power supply shall be incorporated in the fixed wiring and have an air gap in contact separation of at least 3mm in each active phase of conductors.
- If the supply cord is damaged, it must be replaced by qualified persons.
- Installing and servicing air conditioning equipment should be done by qualified service personnel only.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning.
- Children should be supervised to ensure they do not play with the appliance.
- User of this appliance is responsible for his / her own safety.
- Warranty shall be voided if installation instructions and safety precaution stated in this manual are not observed.
- Never cut off the mains supply when unit is under operation. The unit should be switched off by using only the ON-OFF button on the control interface.

**WARNING**

*Before any service or maintenance operations turn off the mains electrical supply.*

## B.1. Installation

First check the contents of the package.

### B.1.1. Standard configurations and accessories

There are three types of plug-and-play control box:

- **SK-NCEF-001b control box:**

PCE2(F2)-(V/P)S configuration – complete function integrated controller, compatible with IR handset controller, wired wall-pad, serial networking for master-slave and MODBUS applications.

- **SK-NCEF-002 control box:**

PCE2(F2)-(V/P)W or PCE2(F2)-(V/P)W-EH configuration – limited function controller, compatible with standard wired thermostat controller, with zone control functionality.

Optional and standard accessories supplied with the unit are dependent on control configuration type.

Control Configuration Type		
Accessory list:	~S: Complete function onboard PCB with integrated group control functionality.	~W: Limited function onboard PCB with drain-pump, louver and zone control functionality.
SK-NCEF-001b Control box with complete function controller.	Standard: Factory installed	N/A
SK-DFPS-A-002.1: IR remote handset	Optional (1 pc)	N/A
SK-DFPS-A-002.2: Wired wall-pad	Optional (1 pc)	N/A
SK-NCEF-002 Control box with limited functionality	N/A	Standard: Factory installed
SK-DFPS-A-001~: STCD wired thermostats ALL models	N/A	Optional (1 pc)
Installation Manual	Standard (1 pc)	Standard (1 pc)
External Drain Pan	Standard (1 pc)	Standard (1 pc)

### B.1.2. Operating Limits

#### Power supplies

Volt	Phase	Hz
230	1	50
220	1	60

#### Water circuit

Minimum entering water temperature	+2 °C
Maximum entering water temperature	+80 °C
Water side maximum pressure	1400 kPa (142 m.w.c)

### B.1.3. Before Installation

- The installation site must be established by the system designer or other qualified professional, taking account of the technical requisites and current standards and legislation.
- Cassette fan coils must be installed by an authorized company only.
- Cassette fan coils are designed for installation in a false ceiling, for intake of fresh air from outside and for deviation of a small part of the treated air for discharge in a neighboring room.
- They must be installed in such a way as to enable treated air to circulate throughout the room and in respect of the minimum distances required for technical maintenance operations.
- It is advisable to place the unit close to the installation site without removing it from the packaging.
- Do not put heavy tools or weights on the packaging.
- Upon receipt, the unit and the packaging must be checked for damage sustained in transit and if necessary, a damage claim must be filed with the shipping company.
- Check immediately for installation accessories inside the packaging.
- Do not lift unit by the condensate drain discharge pipe or by the water connections; lift it by the four corners.(Figure 1)
- Check and note the unit serial number.

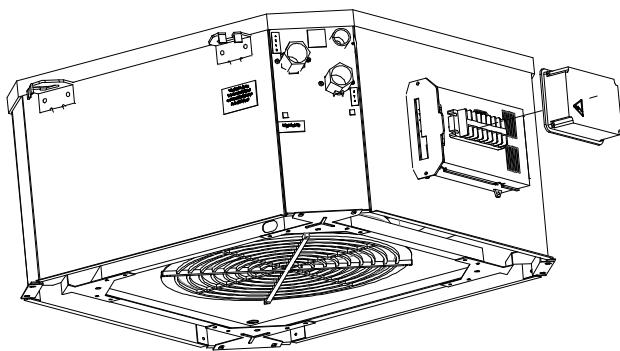

Figure 1

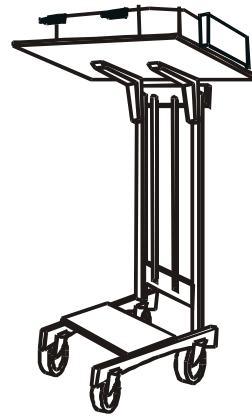

Figure 2

#### B.1.4. Installation Location

- Do not install the unit in rooms where flammable gas or alkaline acid substances are present. Aluminum/copper coils and/or internal plastic components can be damaged irreparably.
- Do not install in workshops or kitchens; oil vapors drawn in by treated air might deposit on the coils and alter their performance or damage the internal plastic parts of the unit.
- Installation of the unit will be facilitated by using a stacker and inserting a plywood sheet between the unit and the elevated stacker.(Figure 2)
- It is recommended to position the unit as centrally as possible in the room to ensure optimum air distribution.(Figure 3)
- Generally the best louver position is the one which allows air diffusion along the ceiling. Alternatively intermediate positions can be selected.
- Check that it is possible to remove panels from ceiling in the selected position, to allow enough clearance for maintenance and servicing operations.

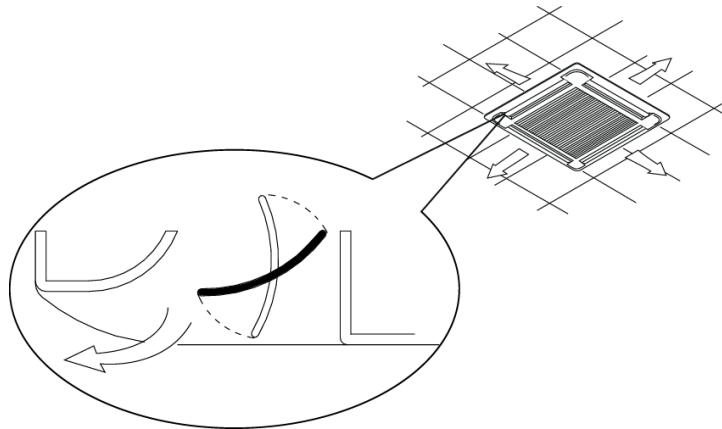

Figure 3

### B.1.5. Installation and False Ceiling Clearance

- Having sufficient strength to carry the weight of the unit.
- Where the inlet and outlet grilles are not obstructed and the conditioned air is able to blow all over the room.
- From where condensate can be easily run to drain.
- Check the distance between the upper slab and false ceiling to ensure the unit will suit the distance.
- Ensure there is sufficient space around the unit to service it.

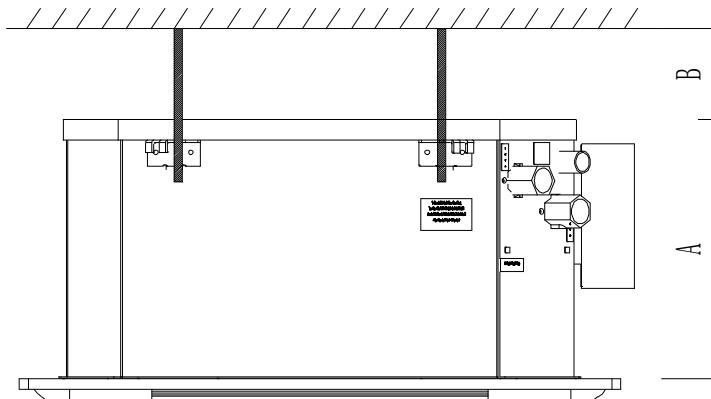

Figure 4

<b>Model</b>	<b>A (mm.)</b>	<b>B (mm.)</b>
PCE2-03/04/09	255	10 or more
PCE2-06/08/08R/12/16 PCF2-16/18/20	290	10 or more
PCF2-09/10/12	260	10 or more

## B.1.6. Pipe Works

### Indoor Unit

- The unit is fitted with a condensate pump with a 500 mm. lift.
- The unit is provided with 22 mm. bore flexible hose 300 mm. long.
- The flexible hose should be fitted into a 22 mm O/S  $\Phi$ . polyvinyl tube and sealed.
- The drain must be installed with a downward slope.
- On completion the drain line should be insulated.

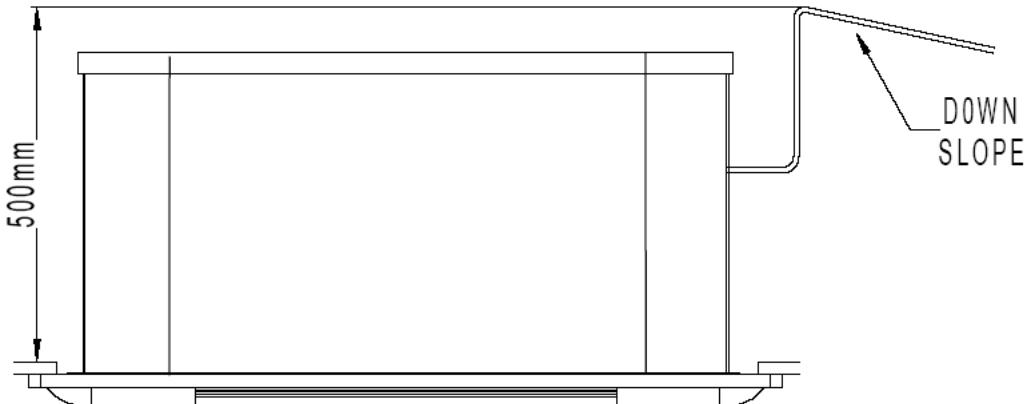

Figure 5

## B.1.7. Water Connections

The cassette unit uses a 3/4" water piping connection with gaskets. It is advisable to tighten the connections with two spanners.

## B.1.8. Valve configurations

- ~S: Units are compatible with:
  - 230VAC 2-way and 3-way on/off valves (thermoelectric or electric motor-driven actuation), with OPEN/CLOSE state actuation.
- ~W: Valve control originates in external wired thermostat. See thermostat manual for details.
- Connections:

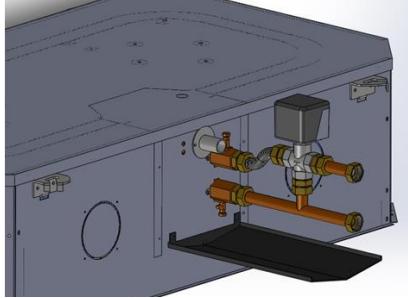

Review below table for information on valve diameter.

Model	External valve information	
	Type	Connector dia. (inch)
All models	2-way & 3-way	3/4"

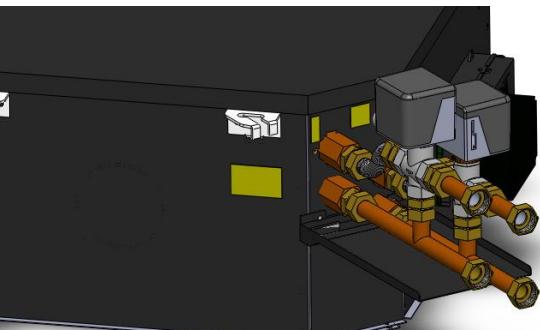

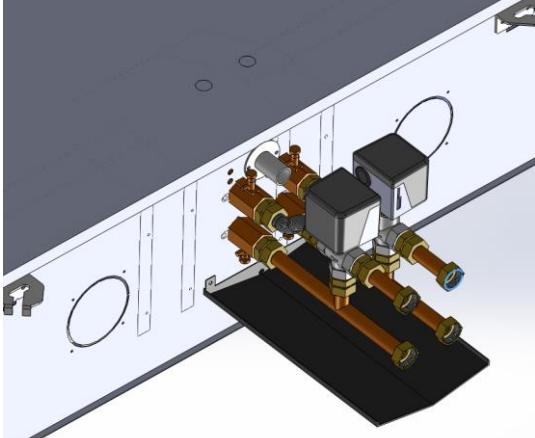

- Valve installations:

See drawings of external valve installation below, by model type.

#### 2-pipe systems:

Single fan model	Twin fan model
	
Figure 6	Figure 7

#### 4-pipe systems:

Single fan model	Twin fan model
	
Figure 8	Figure 9

### B.1.9. External Drain Pan

#### Procedures:

1. Align the two screw holes in the fixing plate to the two holes in the external drain pan. (Figure 10)
2. Make sure the drain pan is horizontal.
3. Tighten the two screws and making sure the external drain pan is installed flush with the fixing plate. (Figure 11)

When the installation is completed, it is necessary to wrap connecting pipe with thermal insulation to prevent condensation on ceiling tiles.

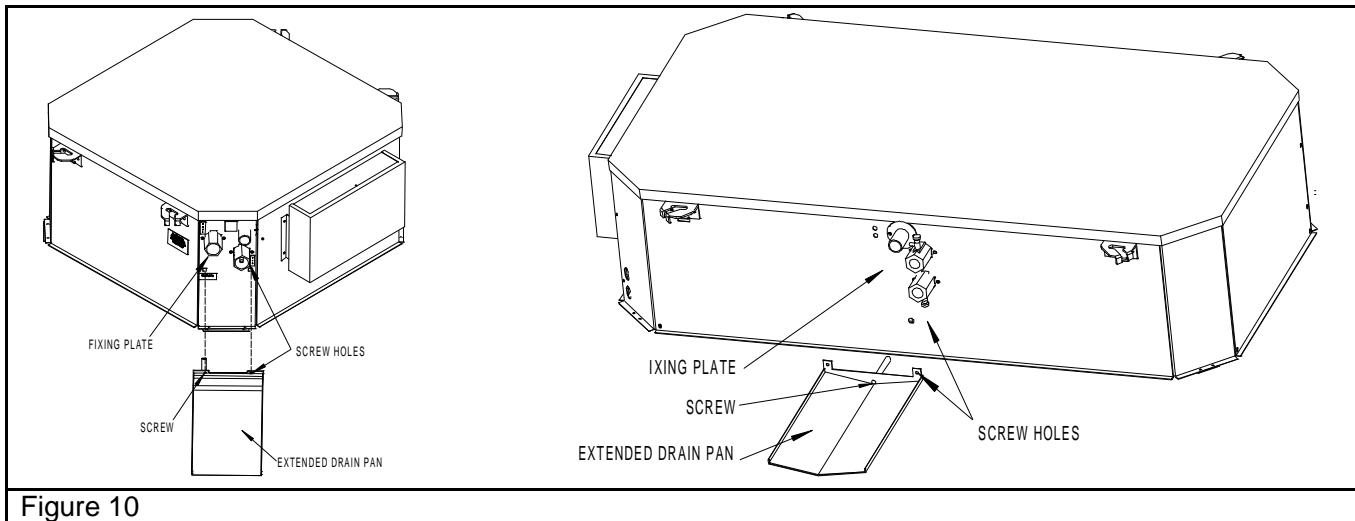

Figure 10

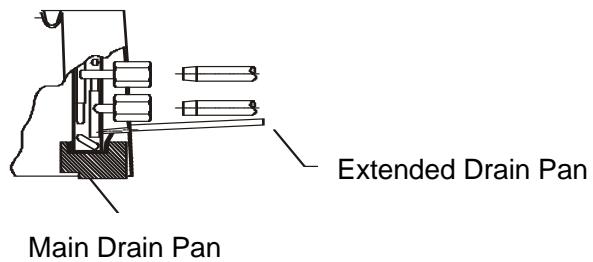

Figure 11

### B.1.10. Fresh Air Renewal Connection

The fresh air system for cassette unit allows fresh air intake.

1. The side opening allows separate ductwork to be installed for outside air intake and branch ducting. (Figure 12).
2. Cut and remove thermal insulating material.
3. Open the mounting plate.
4. Install your flanges and conduits to casing. Conduit can be flexible polyester with spring core or corrugated aluminium externally coated (dia.4 in.) with anti-condensate material (fiberglass 12-25 mm thickness).

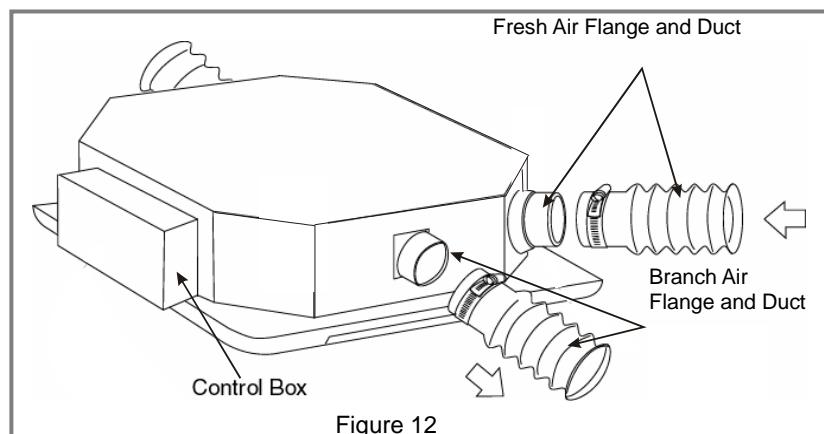

Figure 12

#### Fresh air

There is one opening for connecting a fresh air duct for PCE2-04-08 and PCF2-12-20.  
There are two openings for connecting fresh air ducts for PCE2-09-16.

#### Branch air

PCE2-04-08 and PCF212-20: Two openings each.

PCE2-09-16: Four openings each.

Order flanges (spigots) and blanking plates as accessories separately.

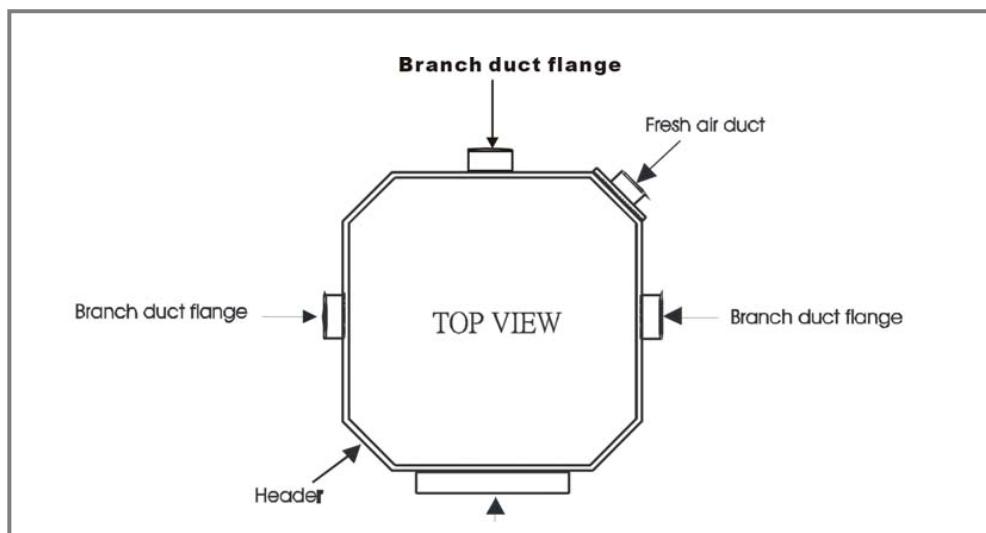

Figure 13

#### NOTE:

- Branch duct flange (Optional part)
- Fresh air duct flange (Optional part)
- Blanking plate (Optional part)

### B.1.11. Branch or Fresh air Duct Connection

- The side opening allows separate ductwork to be installed for branch ducting. (Figure 14).
- Cut and remove anti-condensate insulating material.
- Install your flanges and conduits to casing. Conduit can be flexible polyester with spring core or corrugated aluminum externally coated (dia.4 in.) with anti-condensate material (fiberglass 12-25 mm thickness).

Flanges (spigots) and blanking plates are available as separate accessories items.

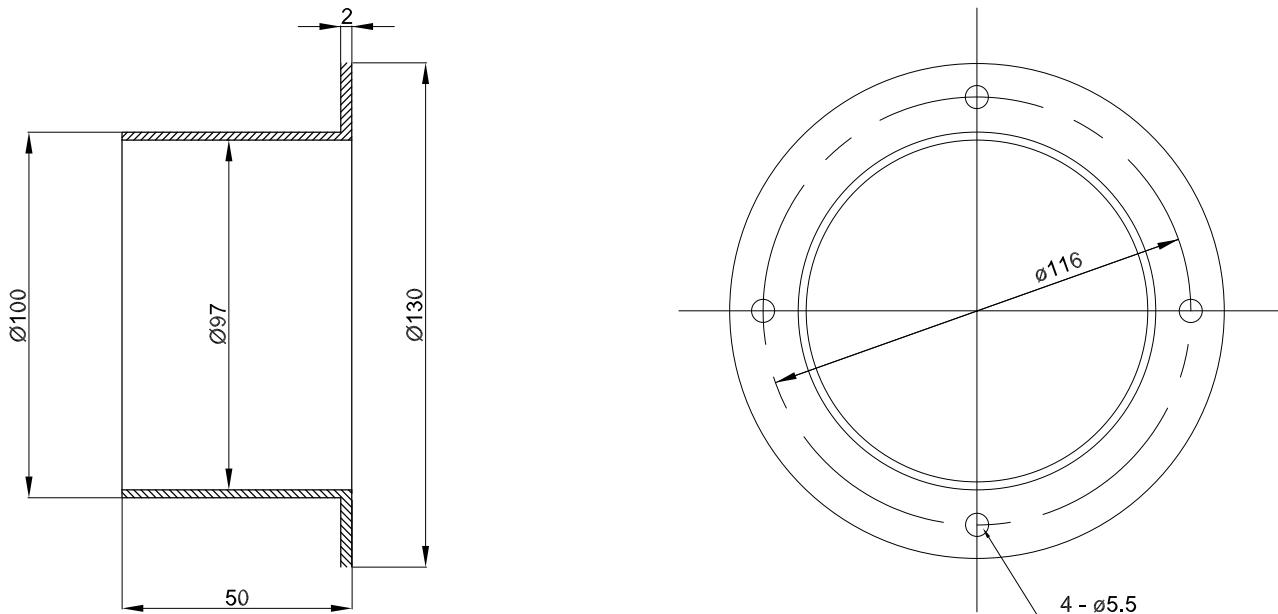

Figure 14 - Branch and Fresh air Duct Dimension

### B.1.12. Branch Duct Installation Procedure

1. Look for the yellow sticker on the casing for location of branch duct or fresh air intake connections.
2. The sticker is at the center of a knock out hole underneath the casing insulation. Use a cutter and follow along the pre-cut circular marking as shown and trim off the insulation.
3. Knock out the pre-cut hole.
4. Connect the flange on to the opening with  $\Phi 3$  mm. x 12 mm. tapping screws.

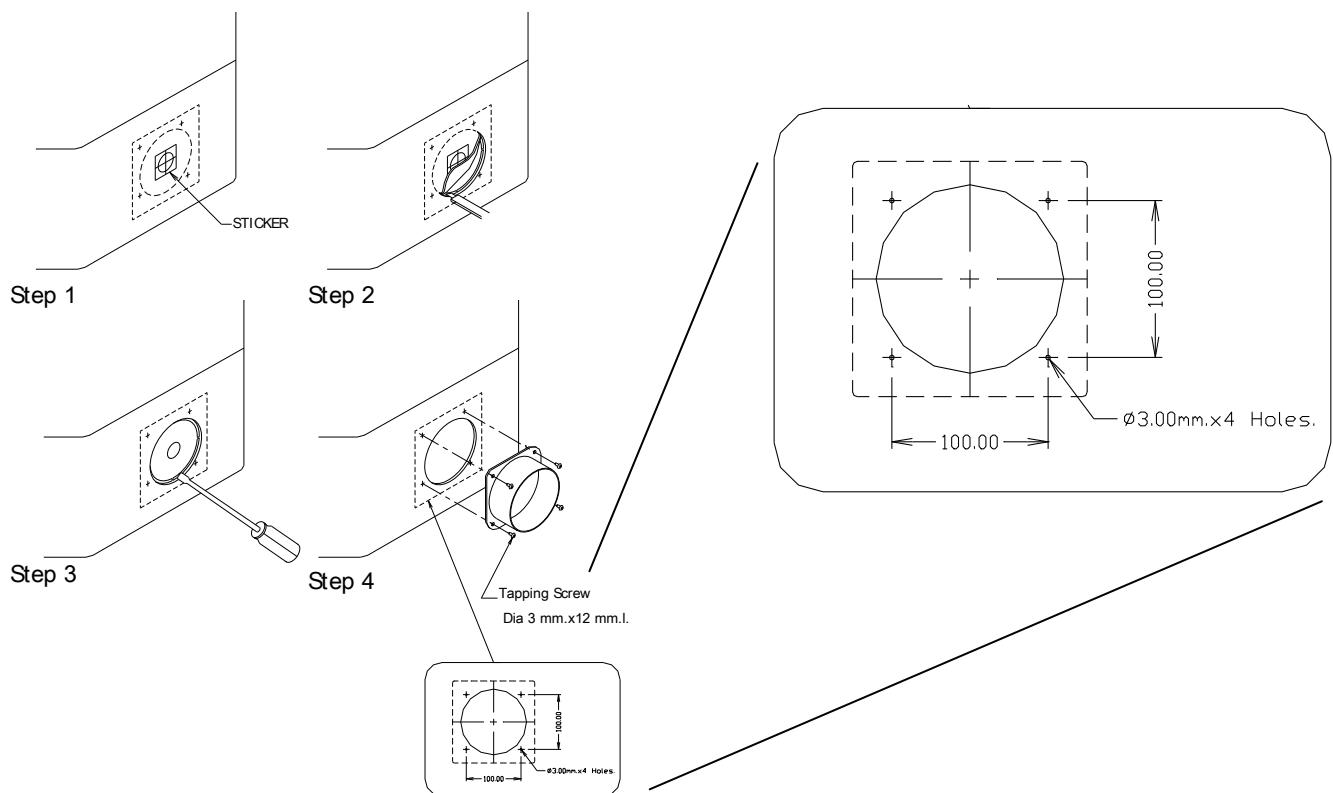

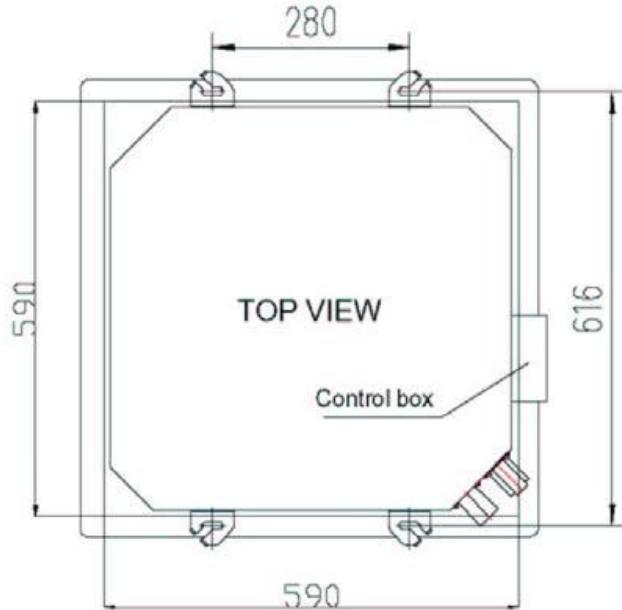

Figure 15

(All dimensions shown in mm)

## B.2. Suspension Bolts Layout and False Ceiling Opening

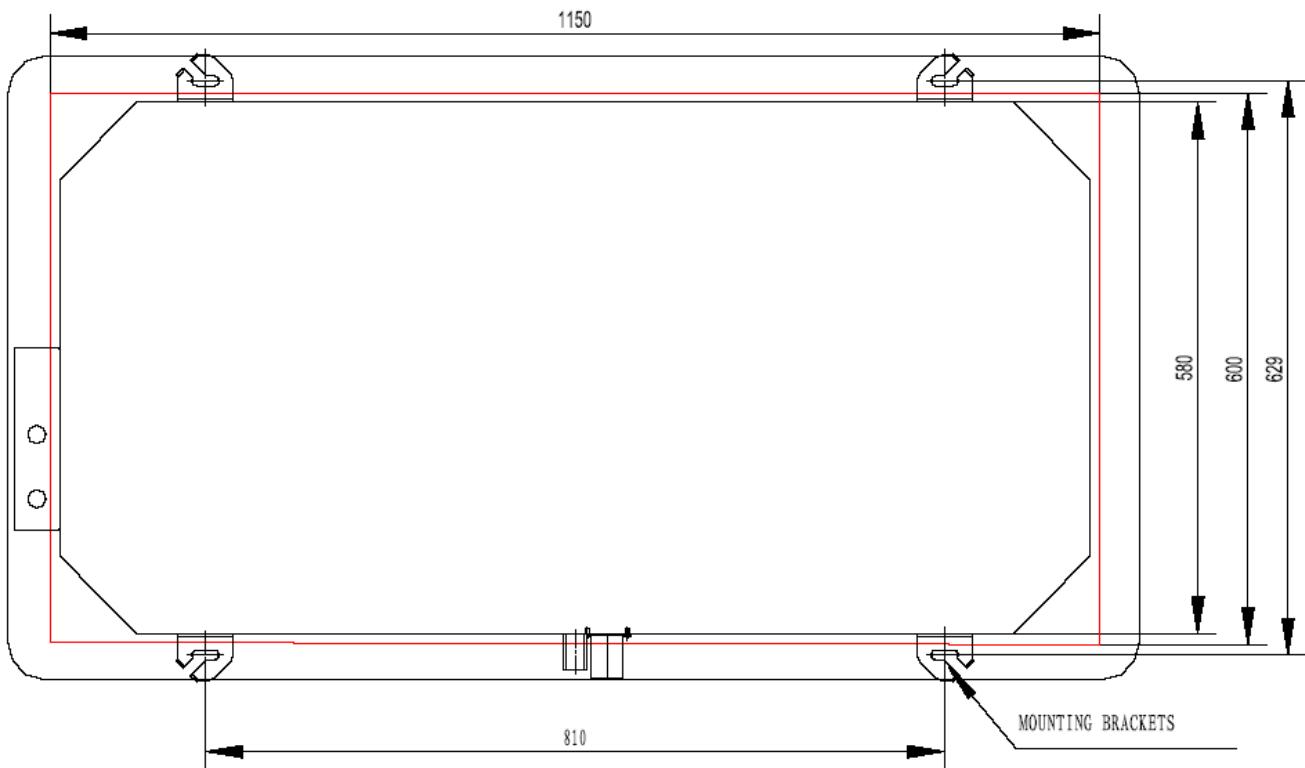

Using the installation template open ceiling panels and install the suspension bolts as in Figures below.

PCE2-03/04/06/08/08R~

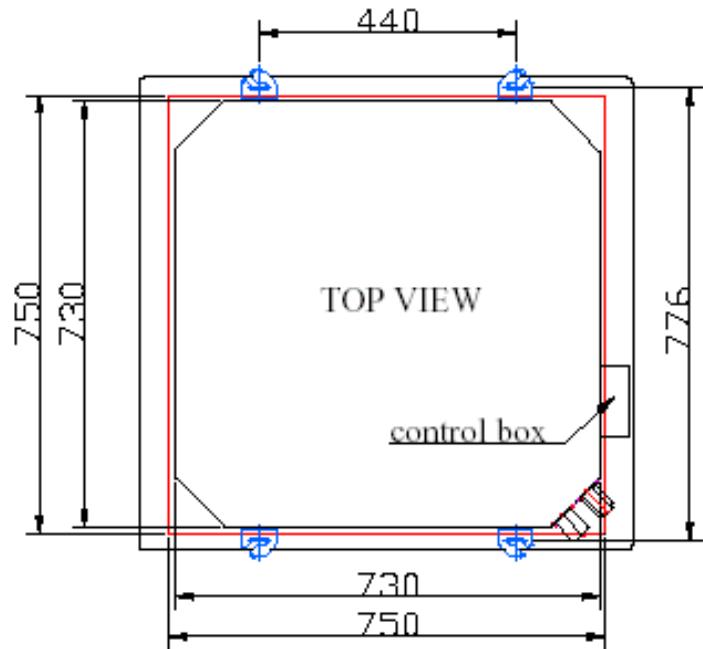

590 x 590: Dimensions for opening  
616 x 280: Suspension Bolts

PCE2-09/12/16~

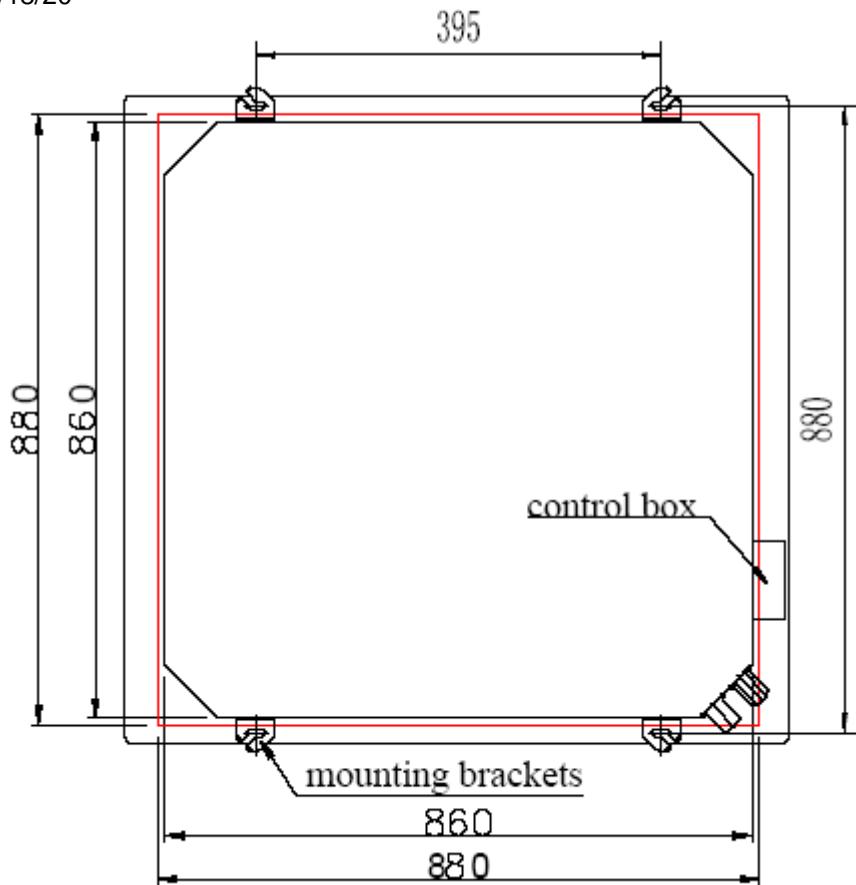

600 x 1150: Dimensions for opening  
810 x 629: Suspension Bolts

PCF2-09/10/12~

750×750: Dimensions for opening  
440×776: Suspension Bolts

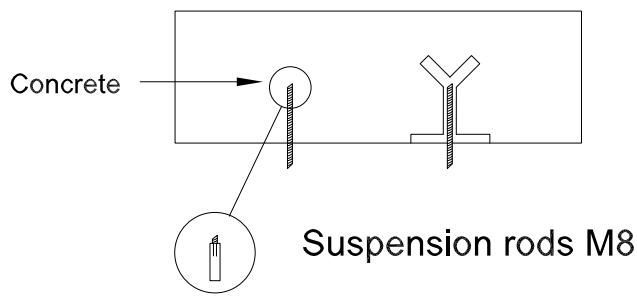

PCF2-16/18/20~

850×850: Dimensions for opening  
395 × 880: Suspension Bolts

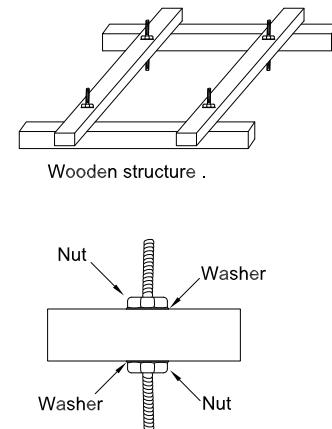

### B.2.1. Suspension Structure

- Mark position of suspension rods, water lines and condensate drain pipe, power supply cables and remote control cable.
- Supporting rods can be fixed, depending on the type of ceiling, as shown in Figure 16 and Figure 17.
- Fit suspension brackets supplied with the unit to the threaded rods (Figure 18)
- Do not tighten nuts and counter nuts; this operation has to be done only after final leveling of the unit, when all the connections have been completed.
- Ensure the ceiling is horizontally level, otherwise condensate water cannot drain.
- The casing is fixed to the slab with 4 drop rods. The rods should have two nuts and washers to lock the unit in position. The cassette brackets will then hook over the washers.
- When lifting the cassette into position, care should be taken. Don't lift the unit by the drip tray.

Fixing on cement ceiling.

Figure 16

Fixing on wooden beam.

Figure 17

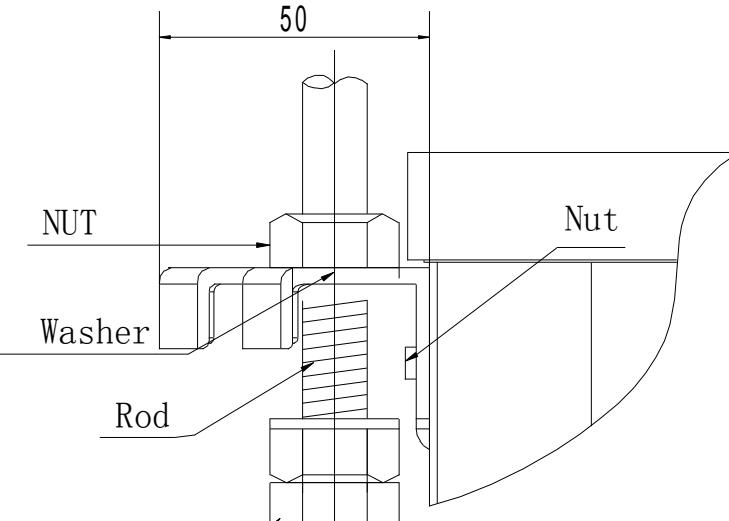

Figure 18

## B.2.2. Installation Procedure

1. Lift unit (without the air panel) with care by its four corners only. Do not lift unit by the condensate drain discharge pipe or by the piping connections.
2. Incline the unit (Figure 19, Figure 20, Figure 22, Figure 23) and insert it into the false ceiling. Insert the rods into the bracket slot. With minimum false ceilings clearance, it might be necessary to remove some T bars of the false ceiling temporarily.
3. Using a level guide, line up the unit with a spirit level, and keep dimension between the body and the lower part of the false ceiling (Figure 21, Figure 24).
4. Line up the unit to the supporting bars of the false ceiling tightening the nuts and counter nuts of the threaded rods.
5. After connection of the condensate drain piping and piping connections, check again that the unit is level.
6. The spaces between the unit and ceiling can now be adjusted. Use the drop rods to make the adjustment.
7. Check to ensure the unit is level. The drain will then automatically be lower than the rest of the drip tray.
8. Tighten the nuts on the suspended rods.

Clearance	3mm

## B.3. Interconnecting Wiring

- We recommend that screened cable be used in electrically noisy areas.
- Always separate low voltage (5VDC) signal wires from power line (230 VAC).
- Do not install the unit where electromagnetic waves are directly radiated at the infra red receiver on the unit.
- Install the unit and components as far away as is practical (at least 5m) from the electromagnetic wave source.
- Where electromagnetic waves exist use shielded sensor cable.
- Install a noise filter if any harmful noise exists in the power supply.

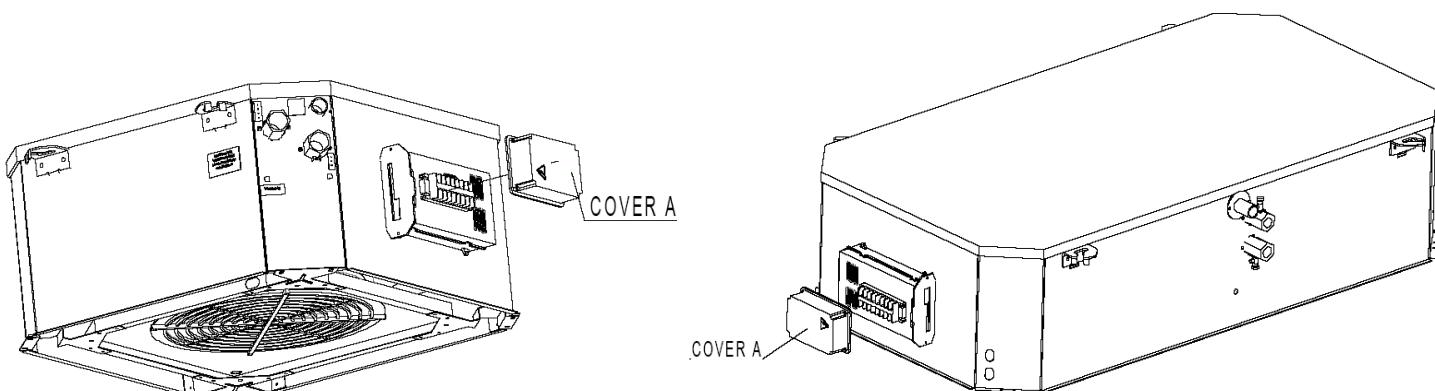

Figure 25

**Important note:** Please ensure the cable of the main powers supply is longer than 500mm from the control box terminal block. This is to ensure the control box can be slid out easily during maintenance activities.

Always take safety precaution before wiring for mains supply. See section B. Safety Precaution.

### B.3.1. Wiring procedures:

1. Open the terminal block cover by removing 4 screws
2. Connect power cable to the terminal according to wiring diagram.
3. Connect room temperature sensor, coil temperature sensors to the control box
4. Connect stepping motor
5. Connect receiver display
6. Connect wall pad (optional)
7. Slide in the control box to the unit casing and fixed with 2 screws

### B.3.2. Mounting Front Panel Assembly

1. Remove return grille from front panel.
2. Move the front panel to casing.
3. Tighten 4 screws as shown in Figure 26 and Figure 27.

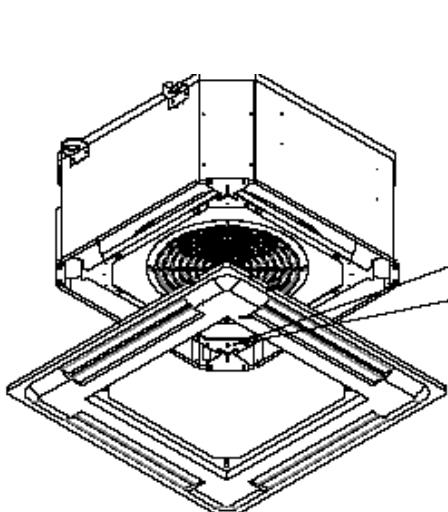

Figure 26

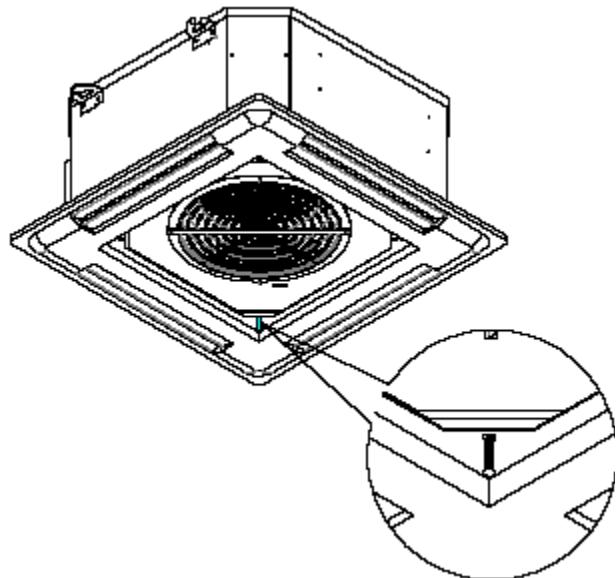

Figure 27

### B.3.3. Filter Removal

1. Unlock the two fasteners on the front panel.
2. Open the grille downward with care.
3. Pull the filter out along the slot.
4. Clean the filter and reassemble.

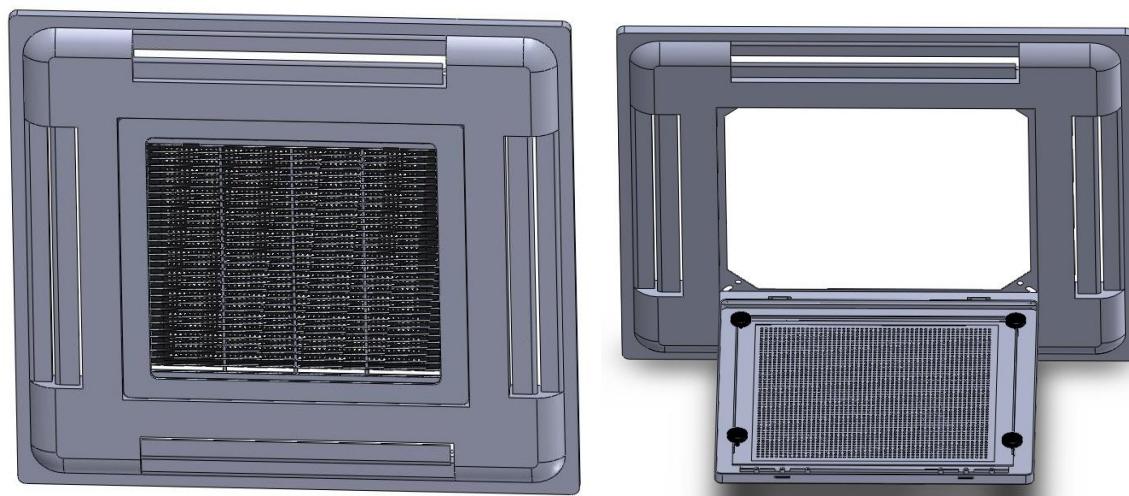

Figure 28

### B.3.4. Getting Start-Up

- The unit should not be started up until the system piping has been cleaned and all the air has been purged.
- Check condensate drain pipe slope.
- After you have connected the main power supply to the cassette unit, it is necessary to check the good function of the condensate water pump which is installed inside.
- Due to transport vibration, it might be possible that the float switch is hung up and the pump might not work in the correct way. For this reason, you have to do the following to ensure good functioning of the unit.
  - Install the cassette unit in an absolute horizontal position.
  - Fill the internal drain pan (manually) with enough water to ensure the drain pump is working.
  - You can fill the drain pan by pouring water through the external drain pan.
  - If everything is correct, the water will be expelled from unit into the pipe work you have installed. If the water don't expel, please manually check the float switch is not faulty.
- Make sure that air filter is clean and properly installed.
- Ensure that voltage and current values correspond with the unit nameplate values; check electrical connections.
- Verify that louvers are open.

## B.4. Maintenance

- 1) Before performing any service or maintenance operations, turn off the main power switch.  
Please see section B. "Safety Precautions".
- 2) The air filter is made of acrylic fiber and is washable in water. To remove filter simply open the intake grille by releasing the two catches. See Figure 28 for the section filter removal.
- 3) Check the filter periodically and before the operating season; clean or replace as necessary.

### B.4.1. For Units Out Of Use for Extended Period.

Prior to restarting the unit:

- Clean or replace the air filters.
- Check and remove any obstruction from the external drain pan and the internal drain pan.

### B.4.2. Extra Maintenance

- The electrical panel is easily accessible by removing the cover panel.
- The inspection or replacement of internal components such as; heat exchanger coil, condensate Drain pump, float switch, involves the removal of the condensate drain pan. See Figure 10 and Figure 11.
- During the removal of the condensate drain pan protect the floor under the unit with a plastic sheet from condensate water that could be spilled.
- Remove fixing screws of the drain pan fixture and remove condensate drain pan with care.
- The appliance is intended to be maintained by qualified service personnel and located at a height of not less than 2.5m.
- Please see section B. Safety Precaution.

## B.5. Customize Fan Speed

Refer to Section B.3.2 for Step 1, 2 and 3.

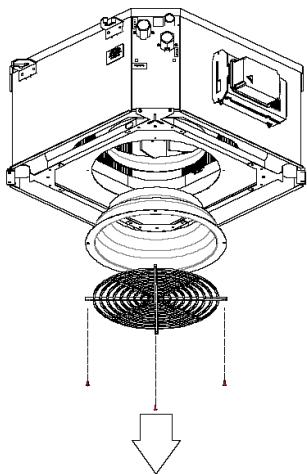

Figure 29  
Step 3 : Remove inner grill and venture

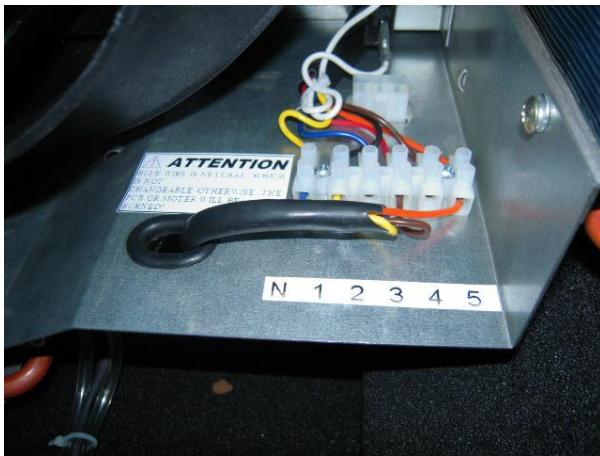

Figure 31

Step 5 : Customizing fan speed by means of rewiring the terminal block shown in the picture.

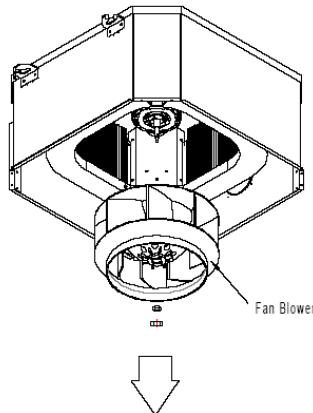

Figure 30

Step 4 : remove the fan blower

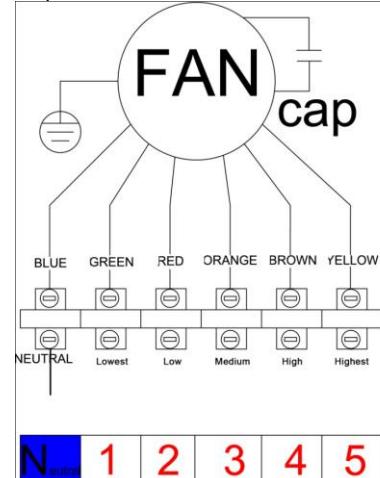

Figure 32

Step 6 : The 3 output wires from Control PCB for fan speed (labeled LF / MF / HF) may be rewired to any of the 5 input terminal for Motor ( labeled 1, 2 , 3, 4, 5 ). ONE PCB output wire to ONE motor input terminal.

## B.6. Replacing Motor and Fan Blower

Refer to Section B.3.2 for Step 1, 2 and 3.

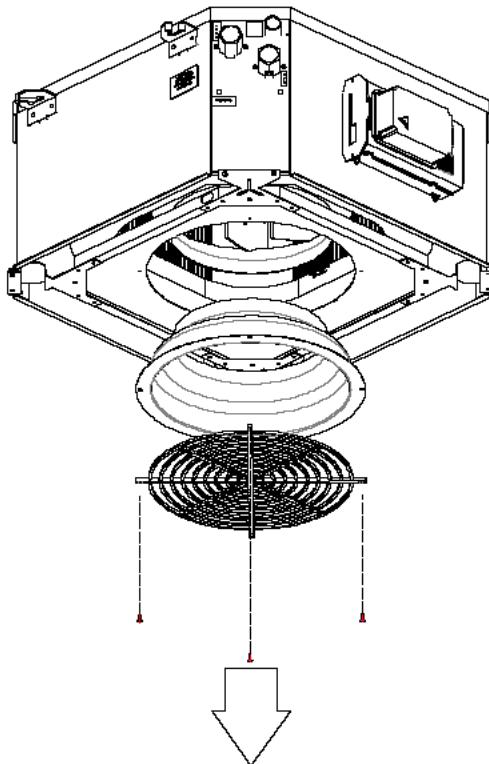

Figure 33

Step 4 : Remove fan blower by using a spanner.

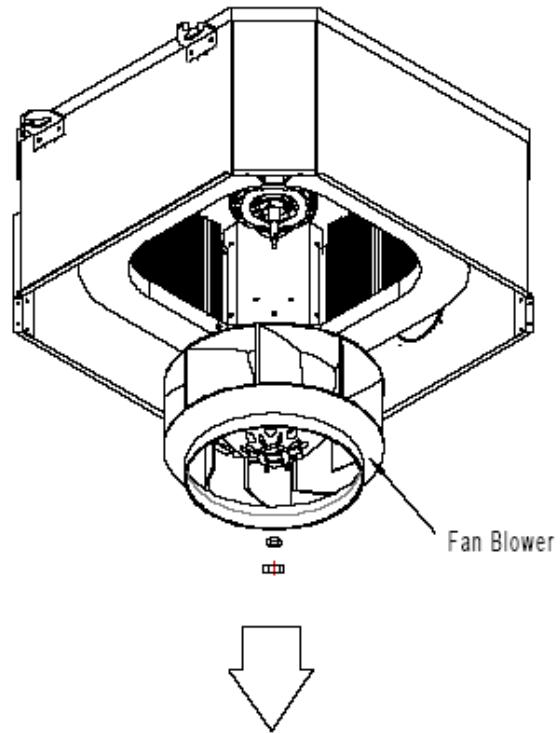

Figure 34

Step 5 : Remove the motor by removing 4 bolts and disconnect fan motor wire connector

## B.7. Replacing Condensate Pump

Refer to Section B.3.2 for Step 1 and 2.

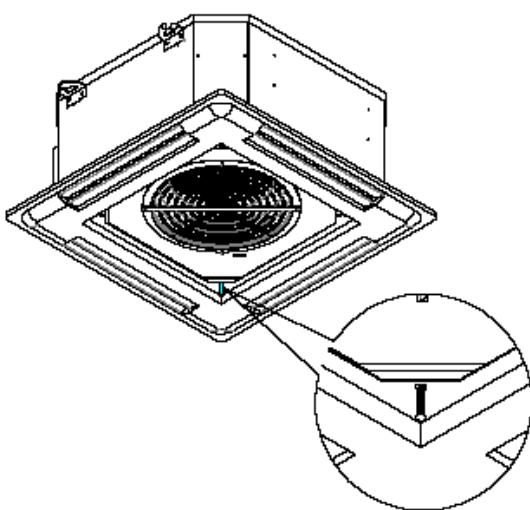

Figure 35

Step 3: Remove front panel and disconnect stepping motor and IR receiver.

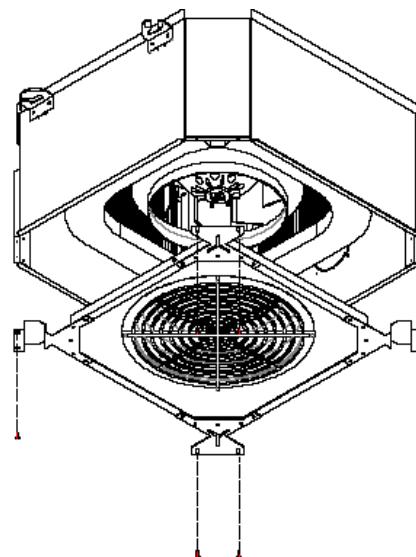

Figure 36

Step 4: Remove the drain pan fixture by removing the 8 screws as shown.

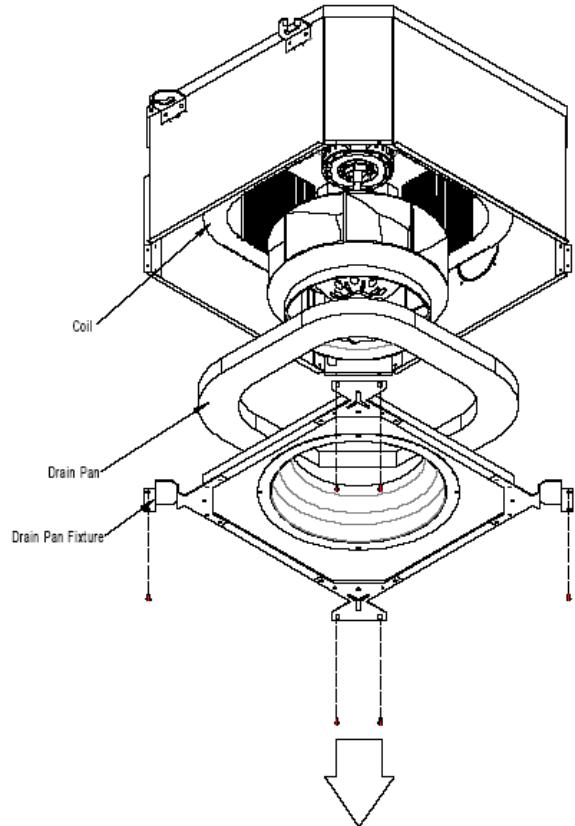

Figure 37

Step 5: Remove the drain pan fixture and internal drain pan.

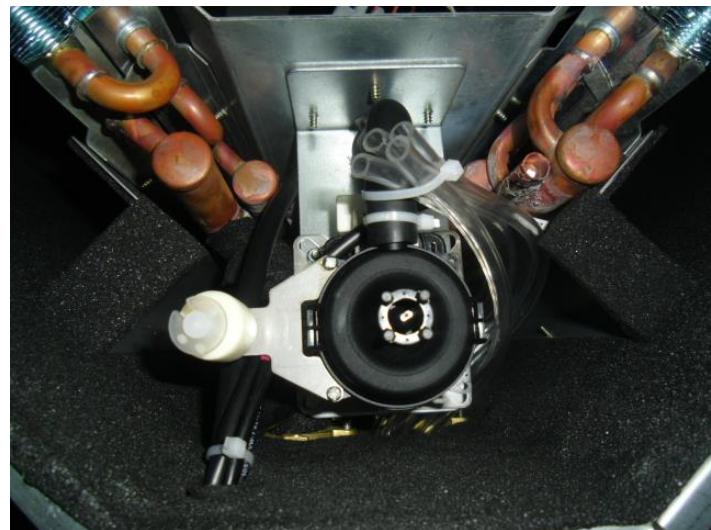

Figure 38

Step 6: Remove the drain pump.

## B.8. Install Electric Heater

To access the inner coil area to install the electric heater, please refer to Figure 35, Figure 36 and Figure 37 for Step 1 ~ 5.

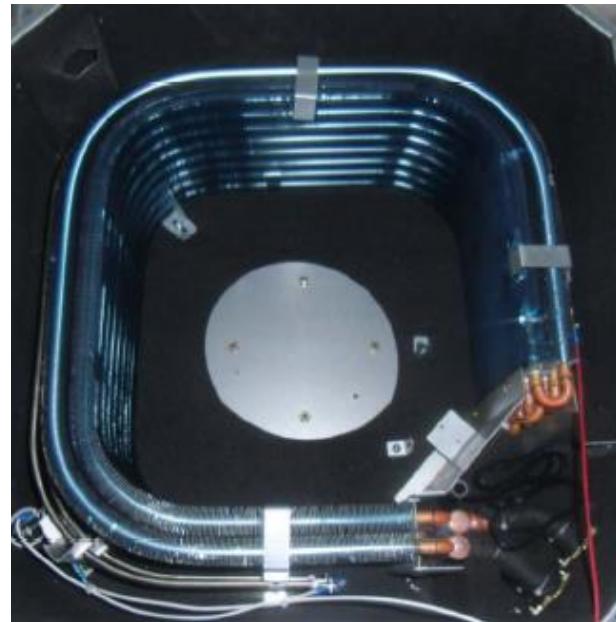

Figure 39

Step 6: Mounting the electrical heater brackets with casing shown above.

Figure 40

Step 7: Connect the electrical wires with control box EH plug shown above.

## C. Control Specifications: SK-NCEF-001b ~S Configuration: Full Control PCB

### Abbreviations

Ts = Setting temperature  
 Tr = Room air temperature  
 Ti1 = Chilled water coil temperature  
 Ti2 = Hot water coil temperature  
 AUX1 = Hot water free contact  
 AUX2 = Chilled water free contact  
 MTV1 = Chilled water valve  
 MTV2 = Hot water valve

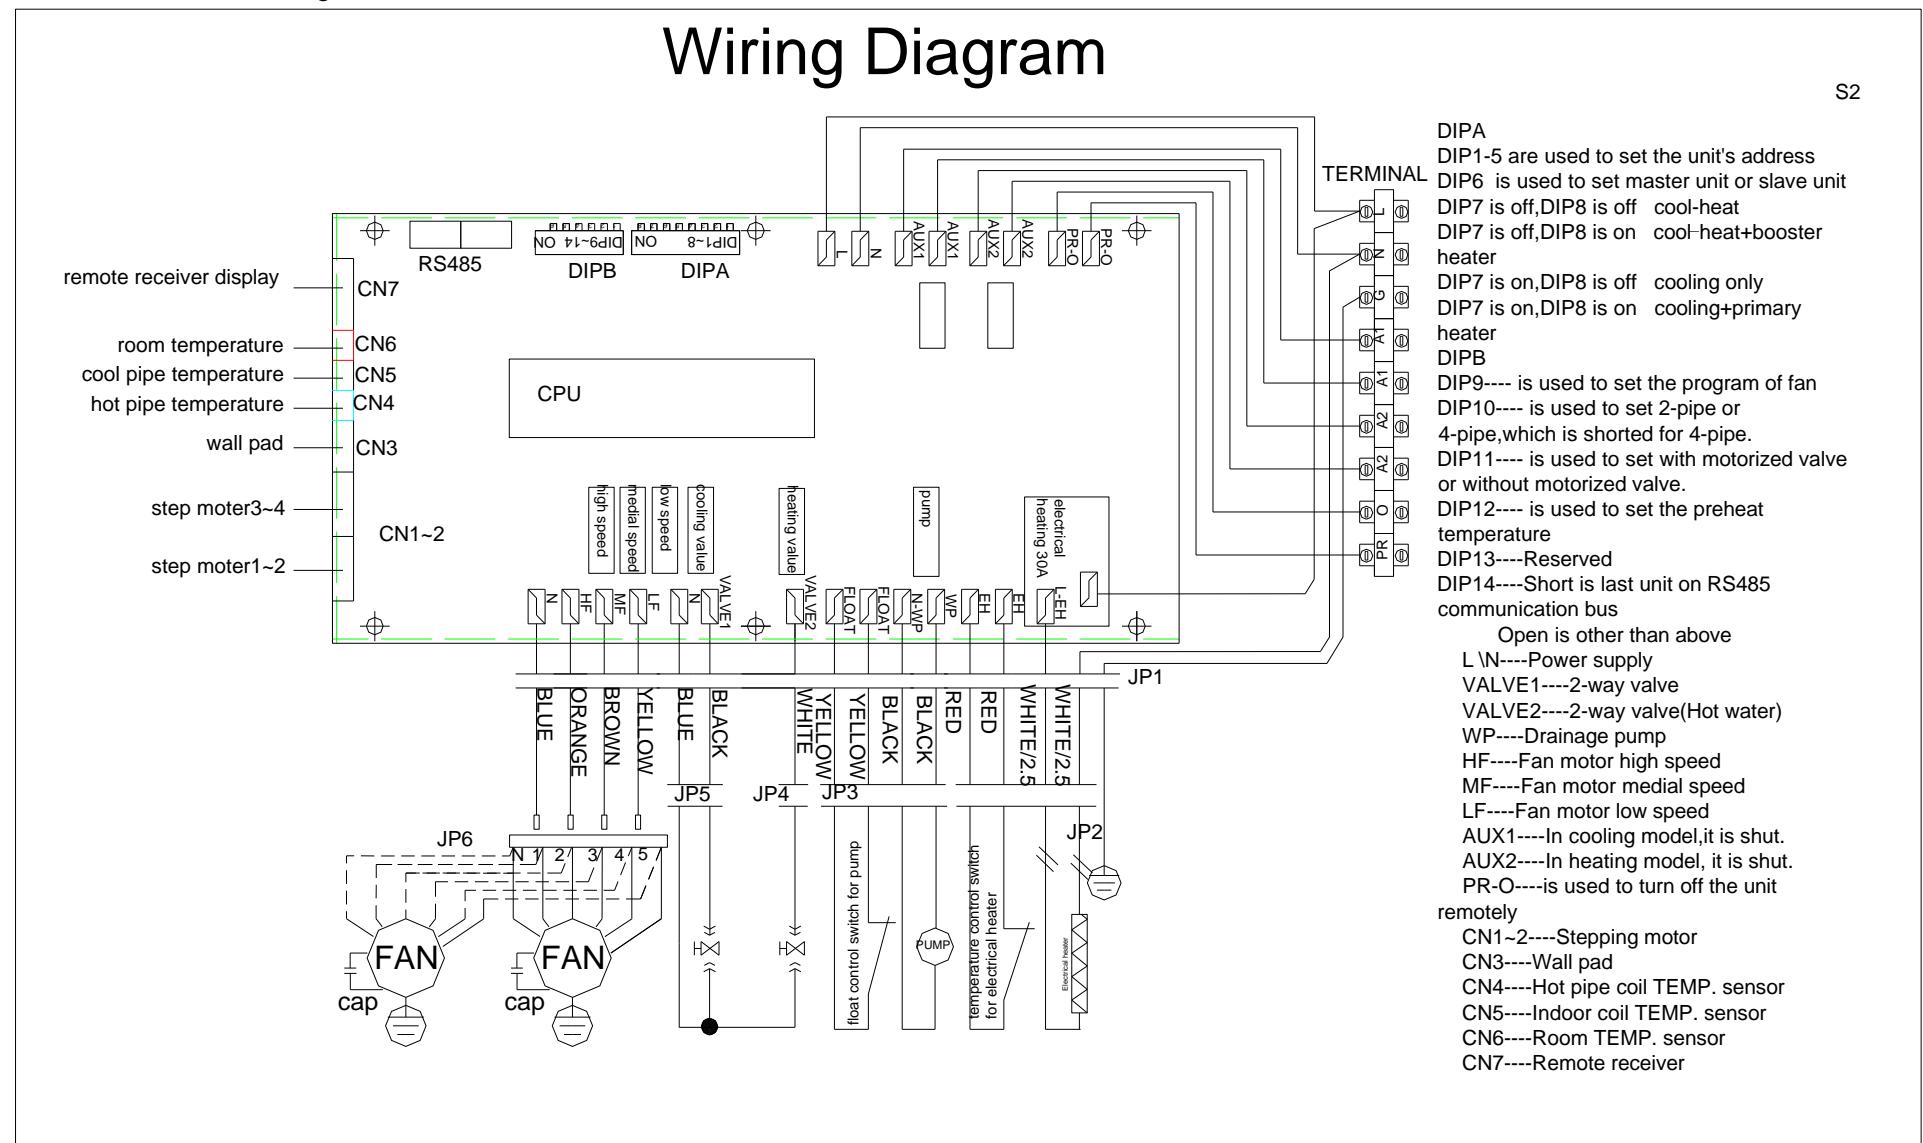

### C.1. I/O Port Definitions

I/O		Code	2-Pipe	4-Pipe
Analogue Input	Room Sensor	CN6	Return air temperature (Tr)	
	Chilled water Sensor	CN5	Chilled / hot water coil circuit (Ti1)	Chilled water coil circuit (Ti1)
	Hot water Sensor	CN4	N/A	Hot water coil circuit (Ti2)
Input	IR receiver	CN7	Digital communication port to LED display/ IR receiver board.	
	Wired wall pad	CN3	Digital communication port to wired wall-pad board.	
Digital input	Occupancy contact	PR-O	This contact may be connected to occupancy sensor or BMS system.	
			<b>DIP-SWITCH IS ON. (Window contact)</b> The contact is normally open. If the contact has been closed for 10 minutes, the unit will be shut down. When the contact is open again, the unit restarts.	
	Float switch	Float	<b>DIP-SWITCH IS OFF. (Economy contact)</b> Cooling operation will only be activated when $Tr - Ts \geq 4^\circ C$ . If $Tr < Ts$ , cool operation will be terminated. Heating operation will only be activated when $Tr - Ts \leq -4^\circ C$ . If $Tr > Ts$ , heating operation will be terminated.	
	Electrical heater safety switch	EH	Voltage-free (NC). The contact is closed before the EH is turned on.	
Power input	Phase	L	Power supply to the PCB and all the loads connected to the voltage outputs. Max length: 5m.	
	Neutral	N	Power supply to the PCB and all the loads connected to the voltage outputs. Max length: 5m.	
	Earth	GND	Power supply to the PCB and all the loads connected to the voltage outputs. Max length: 5m.	

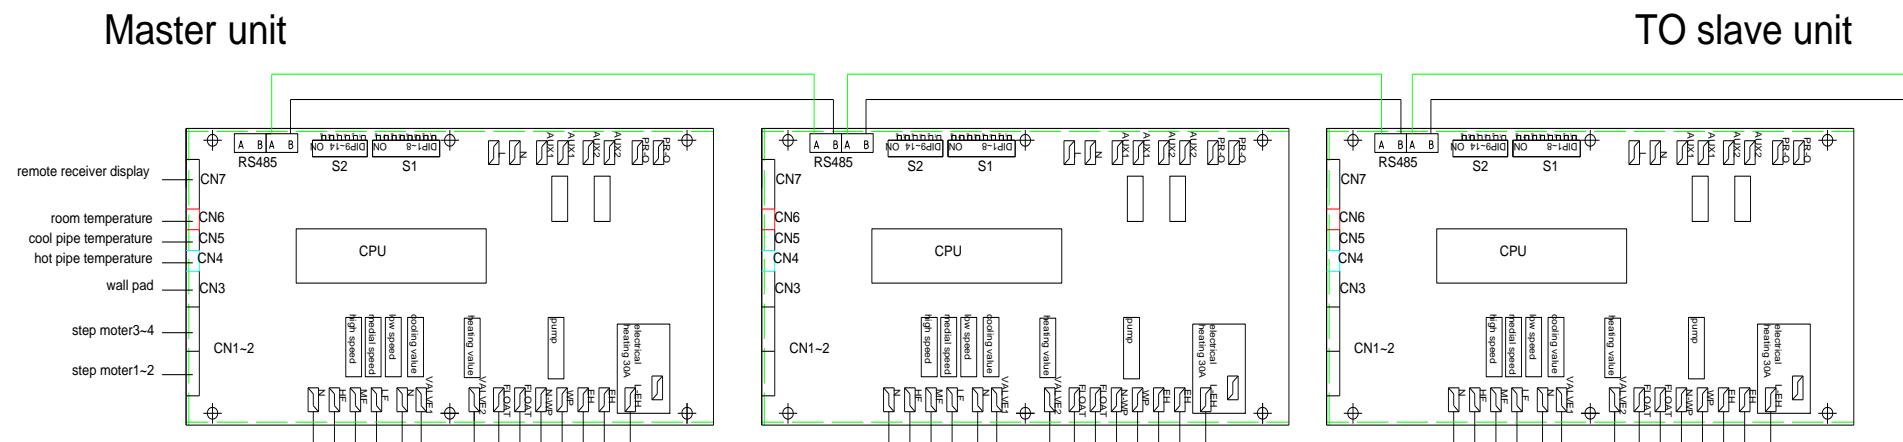

I/O		Code	2-Pipe	4-Pipe
Voltage output	High fan speed	HF	Max length: 5m. Voltage output (L)	
	Medium fan speed	MF	Max length: 5m. Voltage output (L)	
	Low fan speed	LF	Max length: 5m. Voltage output (L)	
	Valve1	MTV1	Water valve Voltage output (L)	Chilled water valve Voltage output (L)
	Valve2	MTV2	Reserved	Hot water valve Voltage output (L)
	Water pump	WP	Voltage output (L)	
	Voltage of electrical heater (Live)	L-EH	Voltage output (L), maximum 30A	
Output	Stepping motor	CN1-2	Power supply to louver stepping motors Voltage output (L)	
	Cold water free contact.	AUX2	Voltage free contact. To ensure the sensitivity of the connection, please make sure Max wiring length < 30m. Maximum load 5A.	
	Hot water free contact.	AUX1	Voltage free contact. To ensure the sensitivity of the connection, please make sure Max wiring length < 30m. Maximum load 5A.	
	In Modbus signal	CN10	Terminals for local network serial connection	
	Out Modbus signal	CN11		

## C.2. Wiring Diagram

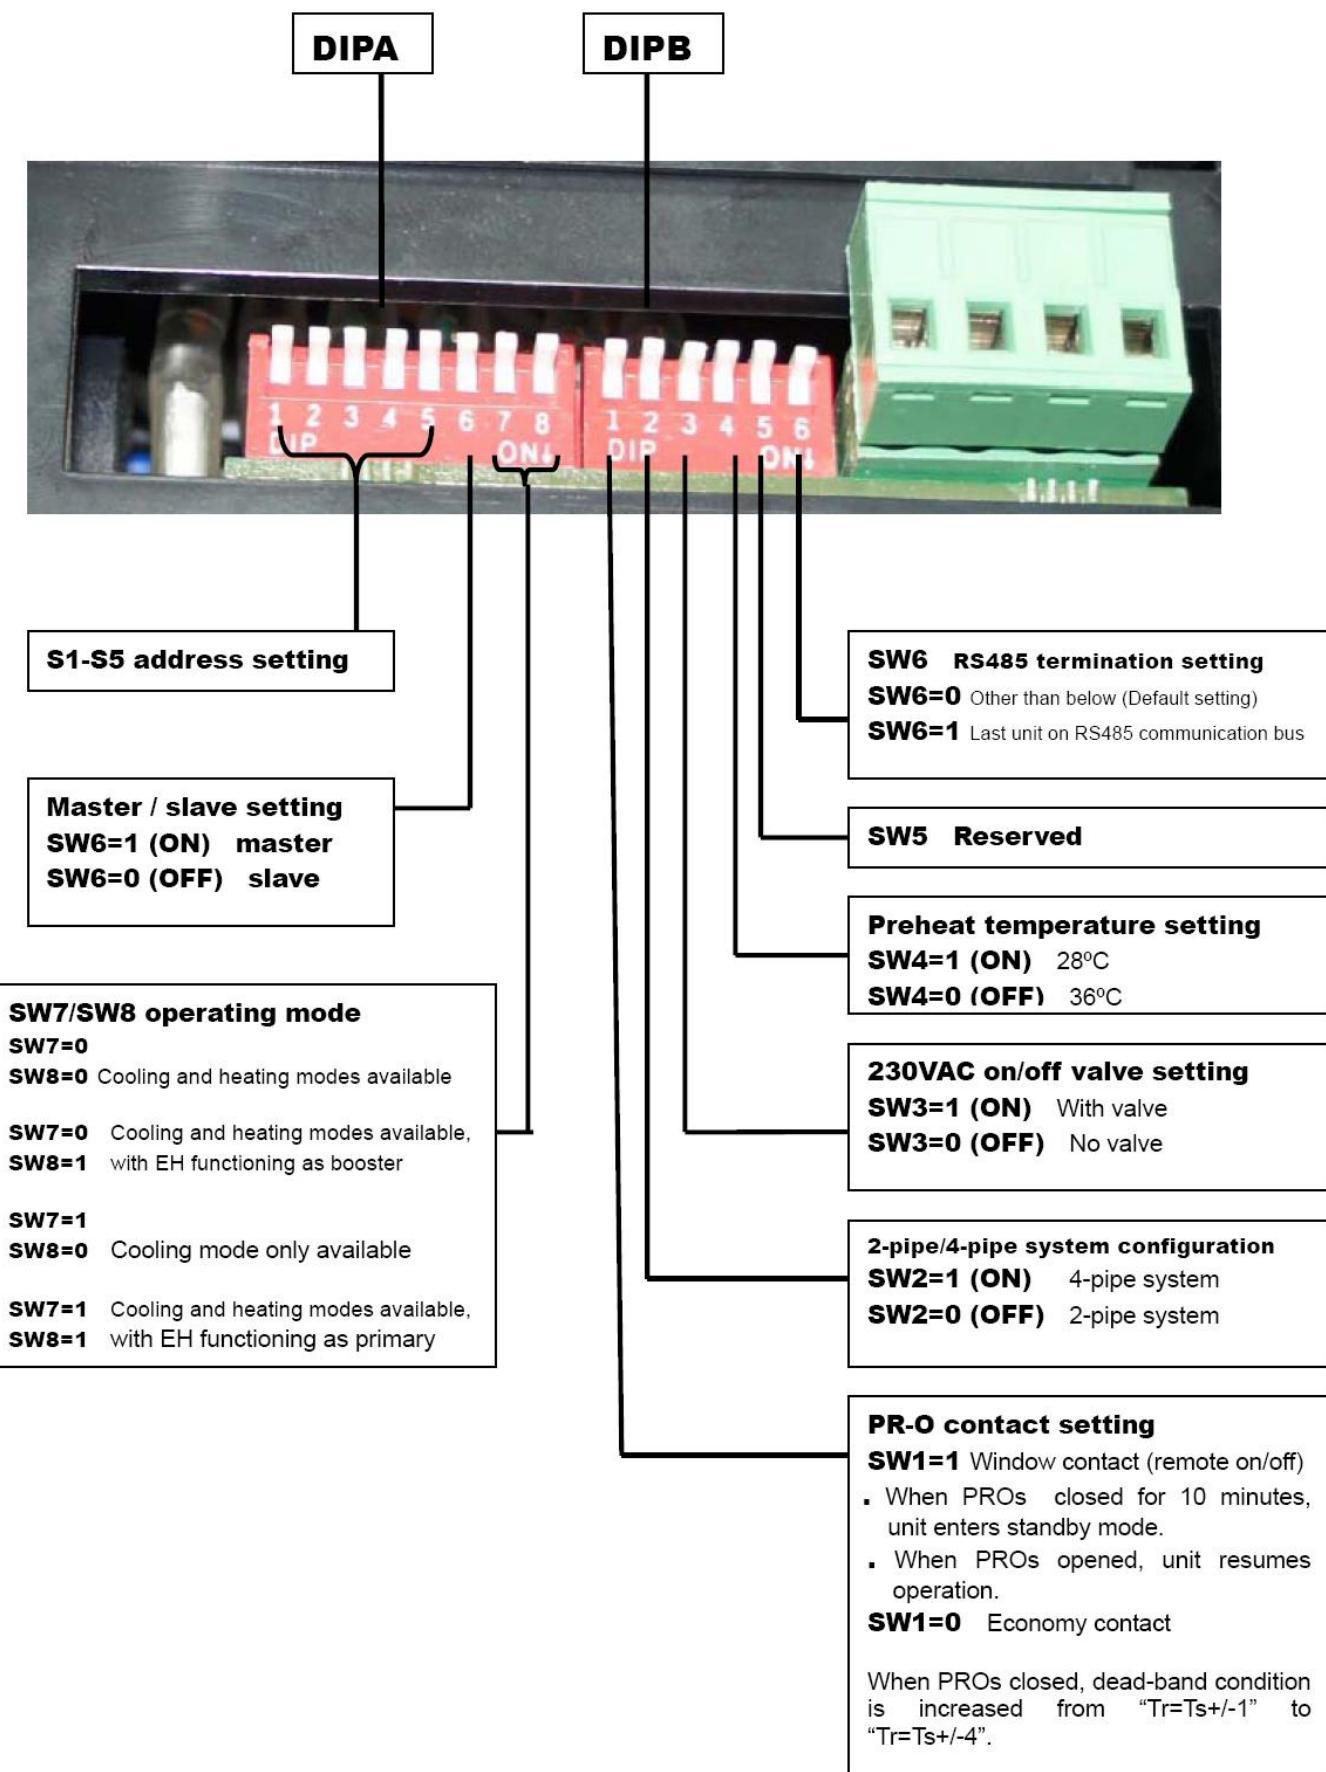

SK-NCEF-001b, ~S Configuration: Full Control PCB:

Master slave networking wiring diagram:

### C.3. Configuration Settings

## AIR CONDITIONER ON/OFF

There are 3 ways to turn the system on or off:

- a) By the ON/OFF button on the remote handset or wired wall pad;
- b) By the programmable timer on the handset or wired wall pad.
- c) By the manual control button on the air conditioner.

## AUTO-RESTART

The system uses a non-volatile memory to save the present operation parameters when system is turned off or in case of system failure or cessation of power supply.

The restored parameter data-set depends on the type of user interface.

- a) Handset only user interface:

When the power on signal is received by the air conditioner and no wired wall-pad is installed, the Mode, Fan Speed, Set temperature and Louver/Swing setting will be the same as the handset setting before the last power off.

- b) Wall-pad only OR wall-pad and handset user interface:

When the power on signal is received by the air conditioner and wired wall-pad is installed, the Mode, Fan Speed, Set temperature, Louver/Swing setting and Timer ON/OFF weekly program will be the same as wall pad setting before the last power off.

## C.4. Control Logics For 2-Pipe System

### C.4.1. With Valve Configuration

#### COOL MODE

- a) MTV2, AUX1 and Electrical Heater are always off.
- b) If  $Tr \geq Ts + 1^{\circ}\text{C}$  (or  $+4^{\circ}\text{C}$  if economy contact is activated), cool operation is activated, MTV1 and AUX2 are turned on. Indoor fan runs at set speed.
- c) If  $Tr < Ts$ , cool operation is terminated, MTV1 and AUX2 are turned off. Indoor fan runs at set speed.
- d) The range of  $Ts$  is  $16-30^{\circ}\text{C}$
- e) Indoor fan speed can be adjusted for low, medium, high and auto.
- f) When turned on, MTV1 requires 30 seconds before it is fully open.
- g) When turned off, MTV1 requires 120 seconds before it is fully closed.
- h) When the unit is turned off, indoor fan will delay for 5 seconds before it is turned off.

#### LOW TEMPERATURE PROTECTION OF INDOOR COIL

- a) If  $Ti1 \leq 2^{\circ}\text{C}$  for 2 minutes, MTV1 and AUX2 are turned off. If indoor fan is set for low speed, it will run at medium speed. If it is set at medium or high speed, it will keep running at the same speed.
- b) If  $Ti1 \geq 5^{\circ}\text{C}$  for 2 minutes, MTV1 and AUX2 are turned on. Indoor fun runs at set speed.

#### FAN MODE

- a) Indoor fan runs at the set speed while heater, MTV1, MTV2, AUX1 and AUX2 are turned off.
- b) Indoor fan speed can be adjusted for low, medium and high

## HEAT MODE

### *Without Electrical Heater*

- a) MTV2, AUX2 and heater are always off.
- b) If  $Tr \leq Ts - 1^{\circ}C$  (or  $-4^{\circ}C$  if economy contact is activated), heat operation is activated, MTV1 and AUX1 are turned on. Indoor fan runs at the set speed.
- c) If  $Tr > Ts$ , heat operation is terminated, MTV1 and AUX1 are turned off. Indoor fan repeatedly runs at low fan speed for 30 seconds and stops for 3 minutes.
- d) The range of  $Ts$  is  $16-30^{\circ}C$ .
- e) Indoor fan speed can be adjusted for low, medium, high and auto.
- f) MTV1 will delay for 30 seconds before it is turned on.
- g) MTV1 will delay for 120 seconds before it is turned off.

### *With Electrical Heater as Booster*

- a) MTV2 and AUX2 are always off.
- b) If  $Tr \leq Ts - 1^{\circ}C$  (or  $-4^{\circ}C$  if economy contact is activated), heat operation is activated, MTV1 and AUX1 are turned on. Indoor fan runs at the set speed.
- c) If  $Tr > Ts$ , heat operation is terminated, MTV1 and AUX1 are turned off. Indoor fan repeatedly runs at low fan speed for 30 seconds and stops for 3 minutes.
- d) If  $Ti1 < 40^{\circ}C$ , the electrical heater is turned on. If  $40^{\circ}C \leq Ti1 < 45^{\circ}C$ , the electrical heater is kept in its original state. If  $Ti1 \geq 45^{\circ}C$ , the electrical heater is turned off.
- e) The range of  $Ts$  is  $16-30^{\circ}C$
- f) Indoor fan speed can be adjusted for low, medium, high and auto.
- g) MTV1 will delay for 30 seconds before it is turned on.
- h) MTV1 will delay for 120 seconds before it is turned off

### *With Electrical Heater as Primary Heat Source*

- a) MTV1, MTV2 and AUX2 are always off.
- b) If  $Tr \leq Ts - 1^{\circ}C$  (or  $-4^{\circ}C$  if economy contact is activated), heat operation is activated, Electrical heater and AUX1 are turned on. Indoor fan runs at set speed.
- c) If  $Tr > Ts$ , heat operation is terminated, Electrical heater and AUX1 are turned off. Indoor fan repeatedly runs at low fan speed for 30 seconds and stops for 3 minutes and repeats.
- d) The range of  $Ts$  is  $16-30^{\circ}C$
- e) Indoor fan speed can be adjusted for low, medium, high and auto.

## PRE-HEAT

### *Without Electrical Heater*

- a) If  $Ti1 < 36^{\circ}C$  [or  $28^{\circ}C$  depending on DIP setting], when MTV1 and AUX1 are on, indoor fan remains off.
- b) If  $Ti1 \geq 38^{\circ}C$  [or  $30^{\circ}C$  depending on DIP setting], when MTV1 and AUX1 are on, indoor fan runs at set speed.
- c) If indoor coil temperature sensor is damaged, pre-heat time is set for 2 minutes and indoor fan runs at set speed.

### *With Electrical Heater*

- a) Indoor fan will turn on after the electrical heater is turned on for 10 seconds.

## POST HEAT

### *Without Electrical Heater*

- a) If  $T_{i1} \geq 38^{\circ}\text{C}$ , when MTV1 and AUX 1 are off, indoor fan continues to run at set speed.
- b) If  $36^{\circ}\text{C} \leq T_{i1} \leq 38^{\circ}\text{C}$ , when MTV1 and AUX1 are off. Indoor fan keeps original state.
- c) If  $T_{i1} < 36^{\circ}\text{C}$ , when MTV1 and AUX1 are off. Indoor fan runs 30 seconds and stop 3 minutes repeatedly.
- d) If indoor coil temperature coil is damaged, post-heat time is set for 3 minutes with indoor fan running at set speed.

### *With Electrical Heater*

- a) Indoor fan will turn off after the unit is off for 20 seconds.

## OVER HEAT PROTECTION OF INDOOR COIL

- a) If  $T_{i1} \geq 75^{\circ}\text{C}$ , MTV1 and AUX1 are turned off, indoor fan remains on and runs at high speed.
- b) If  $T_{i1} < 70^{\circ}\text{C}$ , MTV1 and AUX1 are turned on, indoor fan remains on and runs at set speed.
- c) If indoor coil temperature sensor is damaged, the protection mode will become obsolete and the unit will work according to the Pre-heat and Post-heat set times.

## DEHUMIDIFICATION MODE

- a) MTV2, AUX1 and heater always off.
- b) If  $T_r \geq 25^{\circ}\text{C}$ , MTV1 and AUX2 will be ON for 3 minutes, and OFF for 4 minutes.
- c) If  $16^{\circ}\text{C} \leq T_r < 25^{\circ}\text{C}$ , MTV1 and AUX2 will be ON for 3 minutes, and OFF for 6 minutes.
- d) If  $T_r < 16^{\circ}\text{C}$ , MTV1 and AUX2 will be turned off for 4 minutes.
- e) At the end of the above dehumidification cycle, system will decide the next dehumidification control option. Indoor fan will run at low speed throughout the dehumidification process.

## AUTOMODE

### *Without Electric Heater or With Electric Heater as Booster*

- a) Every time the unit is turned on, MTV1 will be turned on, while AUX1, AUX2 and fan are off. MTV2 and heater always off. After 120sec, decide the subsequent operation mode as follow:
  - i. If the coil temperature sensor ( $T_{i1}$ )  $\geq 36^{\circ}\text{C}$ , MTV1, AUX1 and fan will be turned on or off according to HEAT mode.
  - ii. If  $T_{i1} < 36^{\circ}\text{C}$ , MTV1, AUX2 and fan will be turned on or off according to COOL mode.
- b) It will then stay at the above AUTO COOL or AUTO HEAT mode throughout the operating cycle until user change the mode manually or turn off and on the unit.
- c) Should there be failure of  $T_{i1}$  sensor, auto mode is not allowed.

### *With Electric Heater as Primary Heat Source*

- a) If current running mode is AUTO COOL mode, it will change over to AUTO HEAT mode upon satisfy all the conditions below:
  - i.  $T_s - T_r \geq 1^{\circ}\text{C}$  (or  $-4^{\circ}\text{C}$  if economy contact is activated)
  - ii. MTV1 has stop  $\geq 10$  min.
- b) If current running mode is AUTO HEAT mode, it will change over to auto cool mode upon satisfy all the conditions below:
  - i.  $T_r - T_s \geq 1^{\circ}\text{C}$  (or  $+4^{\circ}\text{C}$  if economy contact is activated)
  - ii. MTV1 has stop  $\geq 10$  min.

Note: AUTO COOL or AUTO HEAT operations are the same as COOL or HEAT mode respectively.

#### C.4.2. Without Valve Configuration

##### COOL MODE

- a) Electrical Heater, AUX1, MTV1 and MTV2 are always off.
- b) If  $Tr \geq Ts + 1^\circ C$  (or  $+4^\circ C$  if economy contact is activated), cool operation is activated, AUX2 is on. Indoor fan runs at set speed.
- c) If  $Tr < Ts$ , cool operation is terminated, AUX2 is off. Indoor fan is turned off.
- d) The range of  $Ts$  is  $16-30^\circ C$
- e) Indoor fan speed can be adjusted for low, medium, high and auto.
- f) When the unit is turned off, indoor fan will delay for 5 seconds before it is turned off.

##### LOW TEMPERATURE PROTECTION OF INDOOR COIL

- a) If  $Ti1 \leq 2^\circ C$  for 2 minutes, AUX2 is off. If indoor fan runs at low speed, it will run at medium speed. If indoor fan runs at medium or high speed, it will run at set speed.
- b) If  $Ti1 \geq 5^\circ C$  for 2 minutes, AUX2 is on. Indoor fan runs at set speed.

##### FAN MODE

- a) Indoor fan runs at the set speed while heater, AUX1, AUX2, MTV1 and MTV2 are turned off.
- b) Indoor fan speed can be adjusted for low, medium and high.

##### HEAT MODE (Without Electrical Heater)

- a) MTV1, MTV2, AUX2 and heater are always off.
- b) If  $Tr \leq Ts - 1^\circ C$  (or  $-4^\circ C$  if economy contact is activated), heat operation is activated, AUX1 is turned on. Indoor fan runs at the set speed.
- c) If  $Tr > Ts$ , heat operation is terminated, AUX1 is turned off. Indoor fan repeatedly runs at low fan speed for 30 seconds and stops for 3 minutes.
- d) The range of  $Ts$  is  $16-30^\circ C$ .
- e) Indoor fan speed can be adjusted for low, medium, high and auto.

##### HEAT MODE

###### *With Electrical Heater as Booster*

- a) MTV1, MTV2 and AUX2 are always off.
- b) If  $Tr \leq Ts - 1^\circ C$  (or  $-4^\circ C$  if economy contact is activated), heat operation is activated, AUX1 is turned on. Indoor fan runs at the set speed.
- c) If  $Tr > Ts$ , heat operation is terminated, AUX1 is turned off. Indoor fan repeatedly runs at low fan speed for 30 seconds and stops for 3 minutes.
- d) If  $Ti1 < 40^\circ C$ , the electrical heater is turned on. If  $40^\circ C \leq Ti1 < 45^\circ C$ , the electrical heater is kept in its original state. If  $Ti1 \geq 45^\circ C$ , the electrical heater is turned off.
- e) The range of  $Ts$  is  $16-30^\circ C$ .
- f) Indoor fan speed can be adjusted for low, medium, high and auto.

###### *With Electrical Heater as Primary Heat Source*

- a) Not available

## PRE-HEAT

### *Without Electrical Heater*

- a) MTV1, MTV2 and AUX2 are off.
- b) If  $T_{i1} < 36^{\circ}\text{C}$  [or  $28^{\circ}\text{C}$  depending on DIP setting], AUX1 is on while indoor fan remains off.
- c) If  $T_{i1} \geq 38^{\circ}\text{C}$  [or  $30^{\circ}\text{C}$  depending on DIP setting], AUX1 is on while indoor fan runs at set speed.
- d) If indoor coil temperature sensor is damaged, pre-heat time is set for 2 minutes and indoor fan runs at set speed.

### *With Electrical Heater*

- a) Indoor fan will turn on after the electrical heater is turned on for 10 seconds.

## POST HEAT

### *Without Electrical Heater*

- a) Not available

### *With Electrical Heater*

- a) Not available

## OVERHEAT PROTECTION OF INDOOR COIL

- a) If  $T_{i1} \geq 75^{\circ}\text{C}$ , AUX1 is turned off, indoor fan remains on and runs at high speed.
- b) If  $T_{i1} < 70^{\circ}\text{C}$ , AUX1 is turned on, indoor fan remains and runs at set speed.
- c) If indoor coil temperature sensor is damaged, the protection mode will become obsolete and the unit will work as the Pre-heat and Post-heat set times

## DEHUMIDIFICATION MODE

- a) MTV1, MTV2, AUX1 and heater always off.
- b) If  $T_r \geq 25^{\circ}\text{C}$ , indoor fan and AUX2 will be ON for 3 minutes, and OFF for 4 minutes.
- c) If  $16^{\circ}\text{C} \leq T_r < 25^{\circ}\text{C}$ , indoor fan and AUX2 will be ON for 3 minutes, and OFF for 6 minutes.
- d) If  $T_r < 16^{\circ}\text{C}$ , indoor fan and AUX2 will be turned off for 4 minutes.
- e) At the end of the above dehumidification cycle, system will decide the next dehumidification control option. Indoor fan will run at low speed throughout the dehumidification process.

## AUTOMODE

- a) Not available

## C.5.

## Control Logics For 4-Pipe System

Note: 4-pipe system must always be equipped with 2 valves.

### COOL MODE

- a) MTV2, AUX1 and Electrical Heater always off.
- b) If  $Tr \geq Ts + 1^\circ C$  (or  $+4^\circ C$  if economy contact is activated), cool operation is activated, MTV1 and AUX2 are turned on. Indoor fan runs at set speed.
- c) If  $Tr < Ts$ , cool operation is terminated, MTV1 and AUX2 are turned off. Indoor fan runs at set speed.
- d) The range of  $Ts$  is  $16-30^\circ C$
- e) Indoor fan speed can be adjusted for low, medium, high and auto.
- f) When turned on, MTV1 requires 30 seconds before it is fully open.
- g) When turned off, MTV1 requires 120 seconds before it is fully closed.
- h) When the unit is turned off, indoor fan will delay for 5 seconds before it is turned off.

### LOW TEMPERATURE PROTECTION OF INDOOR COIL

- a) If  $Ti1 \leq 2^\circ C$  for 2 minutes, MTV1 and AUX2 are turned off. If indoor fan is set for low speed, it will run at medium speed. If it is set at medium or high speed, it will keep running at the same speed.
- b) If  $Ti1 \geq 5^\circ C$  for 2 minutes, MTV1 and AUX2 are turned on. Indoor fun runs at set speed.

### FAN MODE

- a) Indoor fan runs at the set speed while heater, MTV1, MTV2, AUX1 and AUX2 are turned off.
- b) Indoor fan speed can be adjusted for low, medium and high.

### HEAT MODE

#### *Without Electrical Heater*

- a) MTV1, AUX2 and heater always off.
- b) If  $Tr \leq Ts - 1^\circ C$  (or  $-4^\circ C$  if economy contact is activated), heat operation is activated, MTV2 and AUX1 are turned on. Indoor fan runs at the set speed.
- c) If  $Tr > Ts$ , heat operation is terminated, MTV2 and AUX1 are turned off. Indoor fan repeatedly runs at low fan speed for 30 seconds and stops for 3 minutes.
- d) The range of  $Ts$  is  $16-30^\circ C$ .
- e) Indoor fan speed can be adjusted for low, medium, high and auto.
- f) MTV2 will delay for 30 seconds before it is turned on.
- g) MTV2 will delay for 120 seconds before it is turned off.

#### *With Electrical Heater as Booster*

- a) MTV1 and AUX2 are always off.
- b) If  $Tr \leq Ts - 1^\circ C$  (or  $-4^\circ C$  if economy contact is activated), heat operation is activated, MTV2 and AUX1 are turned on. Indoor fan runs at the set speed.
- c) If  $Tr > Ts$ , heat operation is terminated, MTV2 and AUX1 are turned off. Indoor fan repeatedly runs at low fan speed for 30 seconds and stops for 3 minutes.
- d) If  $Ti2 < 40^\circ C$ , the electrical heater is turned on. If  $40^\circ C \leq Ti2 < 45^\circ C$ , the electrical heater is kept original state. If  $Ti2 \geq 45^\circ C$ , the electrical heater is turned off.
- e) The range of  $Ts$  is  $16-30^\circ C$
- f) Indoor fan speed can be adjusted for low, medium, high and auto.
- g) MTV2 will delay for 30 seconds before it is turned on.
- h) MTV2 will delay for 120 seconds before it is turned off.

## PRE-HEAT

### *Without Electrical Heater*

- a) If  $T_{i2} < 36^{\circ}\text{C}$  [or  $28^{\circ}\text{C}$  depends on DIP setting], when MTV2 and AUX1 are on, indoor fan remains off.
- b) If  $T_{i2} \geq 38^{\circ}\text{C}$  [or  $30^{\circ}\text{C}$  depends on DIP setting], when MTV2 and AUX1 are on, indoor fan runs at set speed.
- c) If indoor coil temperature sensor is damaged, pre-heat time is set for 2 minutes and indoor fan runs at set speed.

### *With Electrical Heater*

- a) MTV2 and AUX1 turn on.
- b) Indoor fan will turn on after the electrical heater is turned on for 10 seconds.

## POST HEAT

### *Without Electrical Heater*

- a) If  $T_{i2} \geq 38^{\circ}\text{C}$ , when MTV2 and AUX 1 are off, indoor fan continues to run at set speed.
- b) If  $36^{\circ}\text{C} \leq T_{i2} \leq 38^{\circ}\text{C}$ , when MTV2 and AUX1 are off. Indoor fan keeps original state.
- c) If  $T_{i2} < 36^{\circ}\text{C}$ , when MTV2 and AUX1 are off. Indoor fan runs 30 seconds and stop 3 minutes repeatedly.
- d) If indoor coil temperature coil is damaged, post-heat time is set for 3 minutes with indoor fan running at set speed.

### *With Electrical Heater*

- a) Indoor fan will turn off after the unit off for 20 seconds.

## OVER HEAT PROTECTION OF INDOOR COIL

- a) If  $T_{i2} \geq 75^{\circ}\text{C}$ , MTV2 and AUX1 are turned off, indoor fan remains on and runs at high speed.
- b) If  $T_{i2} < 70^{\circ}\text{C}$ , MTV2 and AUX1 are turned on, indoor fan remains on and runs at set speed.
- c) If indoor coil temperature sensor is damaged, the protection mode will become obsolete and the unit will work as the Pre-heat and Post-heat set times.

## DEHUMIDIFICATION MODE

- a) MTV2, AUX1 and heater always off.
- b) If  $T_r \geq 25^{\circ}\text{C}$ , MTV1 and AUX2 will be ON for 3 minutes, and OFF for 4 minutes.
- c) If  $16^{\circ}\text{C} \leq T_r < 25^{\circ}\text{C}$ , MTV1 and AUX2 will be ON for 3 minutes, and OFF for 6 minutes.
- d) If  $T_r < 16^{\circ}\text{C}$ , MTV1 and AUX2 will be turned off for 4 minutes.
- e) At the end of the above dehumidification cycle, system will decide the next dehumidification control option. Indoor fan will run at low speed throughout the dehumidification process.

## AUTOMODE

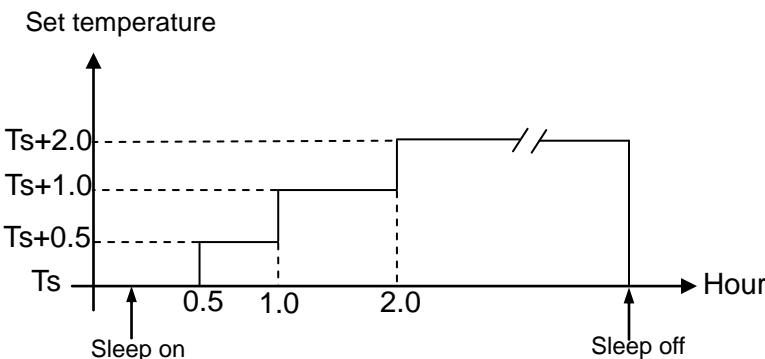

- a) If current running mode is AUTO COOL mode, it will change over to AUTO HEAT mode upon satisfy all the conditions below:
  - i.  $T_s - T_r \geq 1.0^{\circ}\text{C}$ (or  $-4^{\circ}\text{C}$  if economy contact is activated)
  - ii. MTV1 has stop  $\geq 10$  min.
- b) If current running mode is AUTO HEAT mode, it will change over to AUTO COOL mode upon satisfy all the conditions below:
  - i.  $T_r - T_s \geq 1.0^{\circ}\text{C}$ (or  $+4^{\circ}\text{C}$  if economy contact is activated)
  - ii. MTV2 has stop  $\geq 10$  min.

Note: AUTO COOL or AUTO HEAT operations are the same as COOL or HEAT mode respectively.

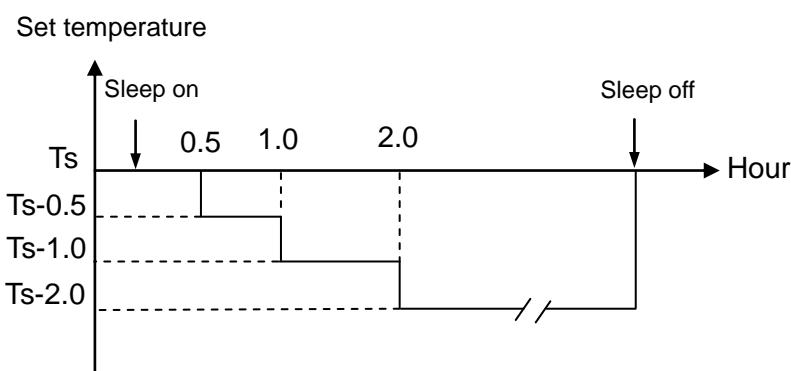

## C.6. Sleep Mode

- a) The sleep mode can only be set when the unit is in cool mode or heat mode.
- b) If the sleep mode is activated when the unit is in cooling, the indoor fan will run at low speed and  $T_s$  will increase  $2^{\circ}\text{C}$  during 2 hours.
- c) If the sleep mode is activated when the unit is in heating, the indoor fan will run at set speed and  $T_s$  will decrease  $2^{\circ}\text{C}$  during 2 hours.
- d) Changing the mode of operation will cancel the sleep mode.

*The cool mode sleep profile is:*

*The heat mode sleep profile is:*

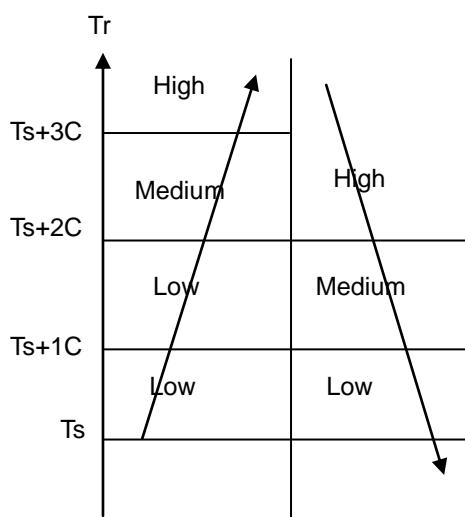

## C.7. Auto Fan Speed

### COOL MODE

Fan speed cannot change until it has run at this speed for more than 30 seconds.

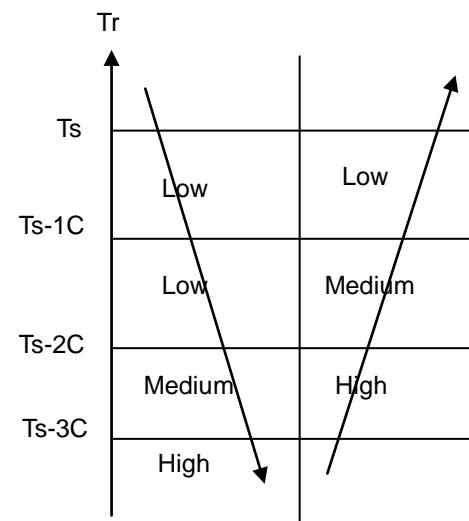

Fan speed is regulated according to the profile below.

### HEAT MODE

Fan speed cannot change until it has run at this speed for more than 30 seconds.

Fan speed is regulated according to the profile below.

After 30 seconds the fan speed is modulated according to the difference between the room temperature and the set temperature. The controller adjusts the motor signal input from 0 to 5VDC by PID calculation at every 10 seconds interval. The air flow is adjusted from 15% to 100%.

## C.8. Swing / Louver

For remote handset with Control Box – I (Integrated Full Control Version)

Whenever indoor fan is running, louver can swing or stop at the desired position.

Louver angle: 0~100 °, opens clockwise with largest angle at 100 °.

Swing angle: 35~100 °, opens clockwise to 68°. Below are the 4 fixed positions which can be set from wireless LCD handset.

Position	Angle against vertical
1	35 °
2	57 °
3	83 °
4	100 °

For wired wall pad with Control Box – I (Integrated Full Control Version)

Louver angle: 0~100 °, opens clockwise, and with biggest angle at 100 °.

Swing angle: 35~100 °, opens clockwise to 68°. User may stop louver at any desired position between 35~100 °.

## C.9. Buzzer

If a command is received by the air conditioner, the master unit will respond with 2 beeps for each setting, and the slave unit will respond with 1 beep.

## C.10. Auto Restart

The system uses non-volatile memory to save the present operation parameters when system is turned off or in case of system failure or cessation of power supply. Operation parameters are mode, set temperature, swing louver's position, and the fan speed. When power supply resumes or the system is switched on again, the same operations as previously set will function.

## C.11. On/Off Switch On The Front Panel

- This is a tact switch to select Cool→Heat→Off operation mode.
- In COOL mode, the set temperature of the system is 24 °C with auto fan speed and swing. There are no timer and sleep modes.
- In HEAT mode, the set temperature of the system is 24 °C with auto fan speed and swing. There are no timer and sleep modes.
- Master unit that does not use wall pad will globally broadcast.

### **NOTE**

*When button pressing is effective, master unit buzzer will beep twice and slave unit beeps once.*

## C.12. Drain Pump

- Drain pump turns ON if thermostat cut in during cooling or dehumidification cooling cycle. It remains on for at least 5 minutes after thermostat cut out. During mode change from cooling to non cooling mode, water pump will on for minimum 5 minutes.

### **WARNING!**

*If the system is turned off at the circuit breaker (or main power supply), the drain pump will not work.*

## C.13. Float Switch

Float-switch opens before turning on.

- If float switch (N/C) is opened before the unit is turned on. MTV1 is off. Drain pump and indoor fan will operate. After float switch is closed, MTV1 is on.

Float switch is opened, when unit is on.

- If float switch is opened continuously ≥ 5 seconds, drain pump will work and MTV1 remain off. When the float switch is closed, the drain pump will run for an additional 5 minutes. If the float switch is opened for 10 minutes continuously, MTV1 will remain off. Indoor fan runs at set speed and system reports error.

Float switch is opened, when unit is off.

- If the float switch is opened, the drain pump will work. When the float switch is closed, the drain pump will run for an additional 5 minutes. If the float switch is opened for 10 minutes continuously, system reports error.

## C.14. Electric Heater Safety Switch

- Before the electrical heater is turned on, the EH safety switch must be closed. If this contact is opened for  $\geq 1$  second, heater will be turned off immediately and report error. Once the contact is returned to close position  $\geq 60$  seconds, reset the error and heater will start again.
- When EH safety switch is opened  $\geq 3$  times within 60 minutes, heater is not allowed to start anymore. Turn off the unit to reset the fault provided that the switch has returned to closed position.

## C.15. LED Indication and Error Description

SK-NCEF-001b

Fan speed setting	LED indication	Condition
High speed	Red LED On	Normal
Medial speed	Yellow LED On	Normal
Low speed	Green LED On	Normal

For all units - Green LED

Error Description	Blink	Reason	Remedy
Electrical heater failure	Green LED blink 1 times, stop 3 sec	<i>Only for unit with EH.</i> EH protection switches is opened.	<ol style="list-style-type: none"> <li>1. Change fan speed to high.</li> <li>2. Replace the damaged protection switch of EH.</li> </ol>
Indoor coil sensor 2 failure	Green LED blink 2 times, stop 3 sec	Ti2 sensor unplugged or damaged.	<ol style="list-style-type: none"> <li>1. Check Ti2 plug is connected or not.</li> <li>2. Check sensor's resistance is correct or not.</li> </ol>
Return air sensor failure	Green LED blink 3 times, stop 3 sec	Room sensor unplugged or damaged.	<ol style="list-style-type: none"> <li>1. Check Tr plug is connected or not.</li> <li>2. Check sensor's resistance is correct or not.</li> </ol>
Indoor coil sensor 1 failure	Green LED blink 4 times, stop 3 sec	Ti1 sensor unplugged or damaged.	<ol style="list-style-type: none"> <li>1. Check Ti1 plug is connected or not.</li> <li>2. Check sensor's resistance is correct or not.</li> </ol>
Indoor coil low temperature protection	Green LED blink 5 times, stop 3 sec	Water temperature is lower than 3 °C.	Check the water temperature.
Indoor coil over heat protection	Green LED blink 6 times, stop 3 sec	Water temperature is higher than 70 °C.	Check the water temperature
Water pump failure	Green LED blink 7 times, stop 3 sec	Float switch is opened.	<ol style="list-style-type: none"> <li>1. Check the condensate water pipe connected or not.</li> <li>2. Check the pump functioned or not.</li> </ol>

## C.16. LED indication on Master/Slave connection

For master unit indicating defect status of all slave units. Error message can be found in LED lights on master unit.

<b>Master unit LED</b>		
<b>Unit No.</b>	<b>Blink</b>	<b>Remedy</b>
Unit 2 failure	RED LED blink 2 times, stop 3 sec	Check unit 2 communication plug and fix it
Unit 3 failure	RED LED blink 3 times, stop 3 sec	Check unit 3 communication plug and fix it
Unit 4 failure	RED LED blink 4 times, stop 3 sec	Check unit 4 communication plug and fix it
Unit 5 failure	RED LED blink 5 times, stop 3 sec	Check unit 5 communication plug and fix it
Unit 6 failure	RED LED blink 6 times, stop 3 sec	Check unit 6 communication plug and fix it
Unit 7 failure	RED LED blink 7 times, stop 3 sec	Check unit 7 communication plug and fix it
Unit 8 failure	RED LED blink 8 times, stop 3 sec	Check unit 8 communication plug and fix it
Unit 9 failure	RED LED blink 9 times, stop 3 sec	Check unit 9 communication plug and fix it
Unit 10 failure	RED LED blink 10 times, stop 3 sec	Check unit 10 communication plug and fix it
Unit 11 failure	RED LED blink 11 times, stop 3 sec	Check unit 11 communication plug and fix it
Unit 12 failure	RED LED blink 12 times, stop 3 sec	Check unit 12 communication plug and fix it
Unit 13 failure	RED LED blink 13 times, stop 3 sec	Check unit 13 communication plug and fix it
Unit 14 failure	RED LED blink 14 times, stop 3 sec	Check unit 14 communication plug and fix it
Unit 15 failure	RED LED blink 15 times, stop 3 sec	Check unit 15 communication plug and fix it
Unit 16 failure	RED LED blink 16 times, stop 3 sec	Check unit 16 communication plug and fix it
Unit 17 failure	RED LED blink 17 times, stop 3 sec	Check unit 17 communication plug and fix it
Unit 18 failure	RED LED blink 18 times, stop 3 sec	Check unit 18 communication plug and fix it
Unit 19 failure	RED LED blink 19 times, stop 3 sec	Check unit 19 communication plug and fix it
Unit 20 failure	RED LED blink 20 times, stop 3 sec	Check unit 20 communication plug and fix it
Unit 21 failure	RED LED blink 21 times, stop 3 sec	Check unit 21 communication plug and fix it
Unit 22 failure	RED LED blink 22 times, stop 3 sec	Check unit 22 communication plug and fix it
Unit 23 failure	RED LED blink 23 times, stop 3 sec	Check unit 23 communication plug and fix it
Unit 24 failure	RED LED blink 24 times, stop 3 sec	Check unit 24 communication plug and fix it
Unit 25 failure	RED LED blink 25 times, stop 3 sec	Check unit 25 communication plug and fix it
Unit 26 failure	RED LED blink 26 times, stop 3 sec	Check unit 26 communication plug and fix it
Unit 27 failure	RED LED blink 27 times, stop 3 sec	Check unit 27 communication plug and fix it
Unit 28 failure	RED LED blink 28 times, stop 3 sec	Check unit 28 communication plug and fix it
Unit 29 failure	RED LED blink 29 times, stop 3 sec	Check unit 29 communication plug and fix it
Unit 30 failure	RED LED blink 30 times, stop 3 sec	Check unit 30 communication plug and fix it
Unit 31 failure	RED LED blink 31 times, stop 3 sec	Check unit 31 communication plug and fix it
Unit 32 failure	RED LED blink 32 times, stop 3 sec	Check unit 32 communication plug and fix it

## D. Networking System

### D.1. Master-Slave Network

The control PCB can be set either as a master unit or slave unit.

#### MASTER UNIT FUNCTION

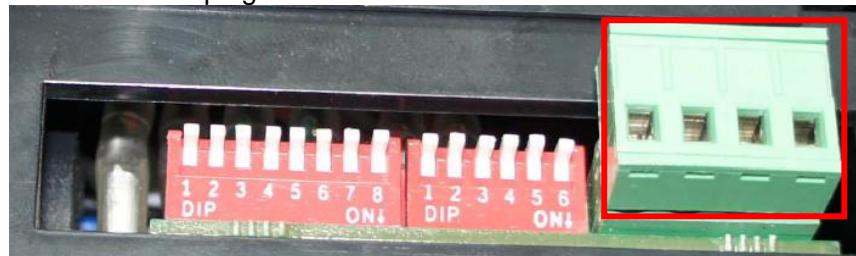

- a) The master unit sends data on its setting to the slave unit.
- b) The master unit settings are Unit ON/OFF, Mode, Fan Speed, Timer, Clock, Set Temperature, Swing Function, and Sleep Function for handset operation.
- c) The master unit settings are Unit ON/OFF, Mode, Fan Speed, Timer, Clock, Set Temperature, Swing Function, and Sleep Function for wall pad operation.

#### SLAVE UNIT FUNCTION

- a) The slave unit receives data on its settings from the master unit.
- b) The slave unit is allowed to change to a locally desired setting by local controller as long as there are no subsequent changes to the settings of the master unit.
- c) The slave units can be set individually for timer on and off function by handset or wall pad. The handset cannot override wall pad timer and clock setting.

### D.1.1. Master – Slave Network Setup

- 1) Disconnect the communication plug from the SK-NCEF-001b

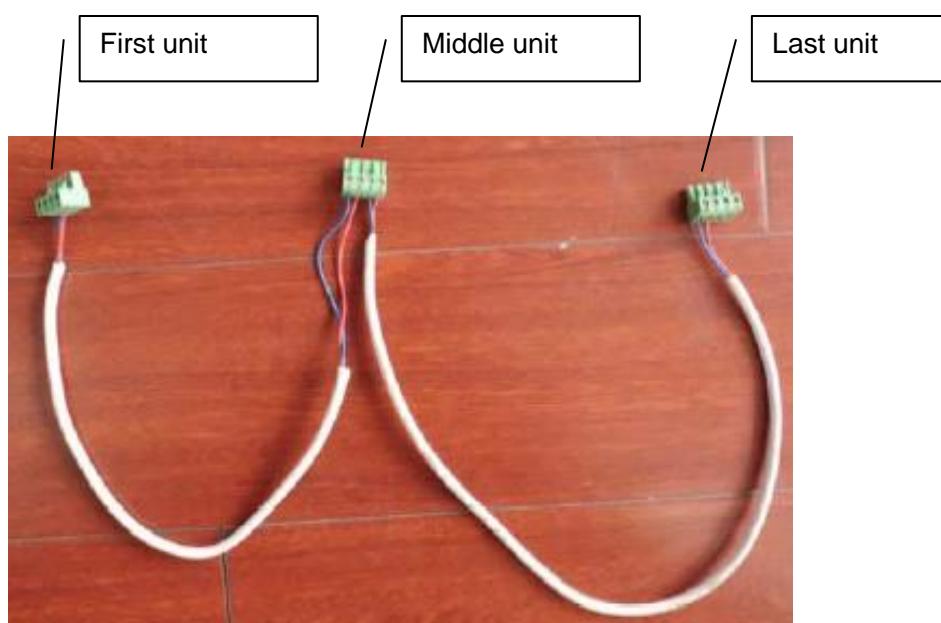

- 2) Communication plug

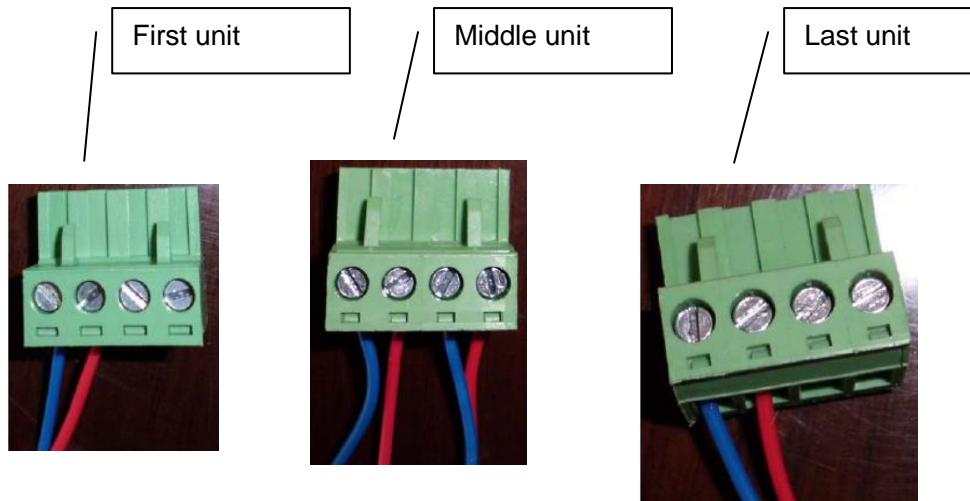

A, B, A, B is printed on the main PCB. When you connect the wires, please ensure connection of A to A and B to B.

- 3) Connection wire

- 3.1) If the total length of wire is more than 1000m, please use shielded wire in order to protect the signal transmission.
- 3.2) Complete wire connection

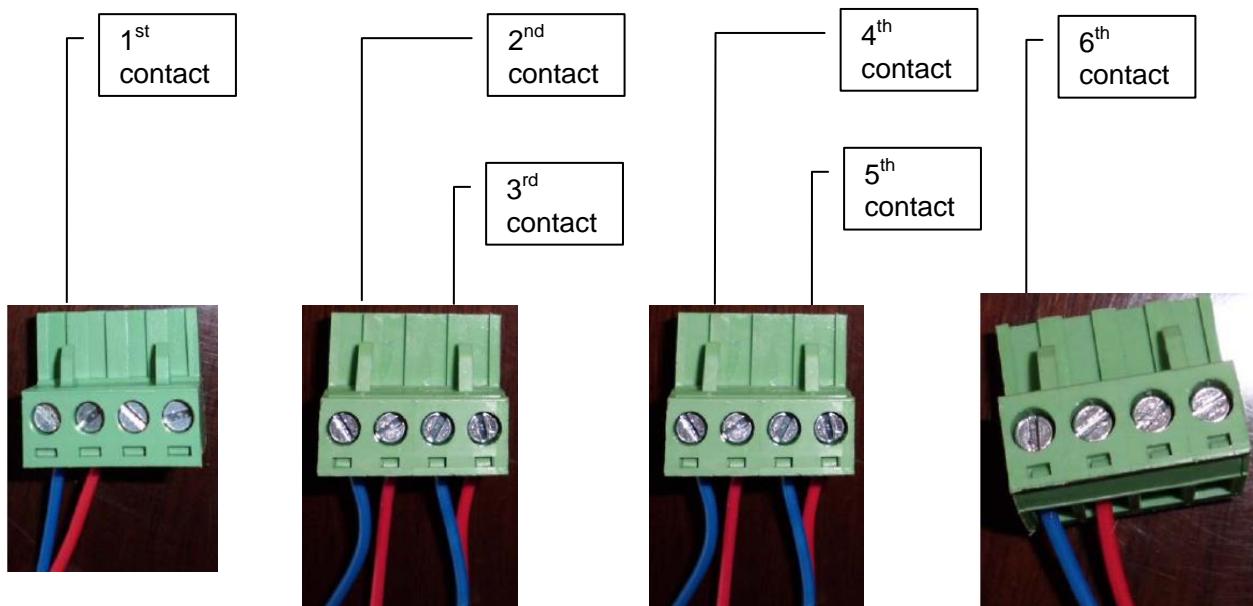

### 3.3) Wire connection check

3.3.1) After wire connection complete, please check the wire colour is correspondence.

3.3.2) Check the wire contact by using a multimeter.

3.3.3) Check 1 and 2, 3 and 4, 5 and 6 to be sure connections correct.

3.3.4) If the resistance between two wire contacts is too high, please check and reconnect the wire contacts.

4) Reconnect the communication plug to control box

#### **Using Remote Control Handset to Set Master Control Unit:**

- a) Connect all the units PCBs according to the wire color and type of connector.
- b) Select the master unit by setting DIPA-S1 SW6 to ON (=1) in the PCB.
- c) Ensure the DIPA-S1 SW6 is set to OFF (=0) in the PCB on each slave unit.
- d) Switch on the units by connecting the main power supply.
- e) Using handset set the operation parameters for the Master unit which will automatically send the settings to the slave unit when pressing the “Network” button for 3 seconds.
- f) Master unit will beep twice confirming receipt of commands while Slave unit will beep once.

#### **Using Wall pad to Set Master Control Unit:**

- a) Connect all the units PCBs according to the wire color and type of connector.
- b) Select the master unit by setting DIPA-S1 SW6 to ON (=1) in the PCB.
- c) Ensure the DIPA-S1 SW6 is set to OFF (=0) in the PCB on each slave unit.
- d) Provide each slave unit an addressable code by configuring SW1 – SW5 of DIPA-S1 according to the DIP switch setting table.
- e) Switch on the units by connecting the main power supply.
- f) Using the wall pad set the operation parameters for the Master unit which will send the setting to the slave units based on Global-control communication or Addressable communication methods.
- g) Master unit will beep twice confirming receipt of commands while Slave unit will beep once.

#### **MASTER-SLAVE CONTROL**

The control PCB can receive data from both wireless LCD handset and wired wall pad.

## D.1.2. Master-Slave Communication Method

There are two modes for Master-slave structure.

### Global Control communication

Master will broadcast the settings to all slave units. During normal operation, slave units can receive commands from its wireless handset and wall pad control panel. Upon reception of master global commands, all slave unit settings will be replaced by the master settings.

### Addressable communication

Master controller must be LCD wall pad. Slave unit parameters are set as usual. Upon receiving the control commands from a master, the addressed slave unit settings will be replaced by the master settings.

DIPA-S1 address setting: ON=1, OFF=0.

DIPA-S1 SW6	DIPA-S1 SW5	DIPA-S1 SW4	DIPA-S1 SW3	DIPA-S1 SW2	DIPA-S1 SW1	Unit No.	Remark
1	0	0	0	0	0	01	Master
0	0	0	0	0	1	02	Slave
0	0	0	0	1	0	03	Slave
0	0	0	0	1	1	04	Slave
0	0	0	1	0	0	05	Slave
0	0	0	1	0	1	06	Slave
0	0	0	1	1	0	07	Slave
0	0	0	1	1	1	08	Slave
0	0	1	0	0	0	09	Slave
0	0	1	0	0	1	10	Slave
0	0	1	0	1	0	11	Slave
0	0	1	0	1	1	12	Slave
0	0	1	1	0	0	13	Slave
0	0	1	1	0	1	14	Slave
0	0	1	1	1	0	15	Slave
0	0	1	1	1	1	16	Slave
0	1	0	0	0	0	17	Slave
0	1	0	0	0	1	18	Slave
0	1	0	0	1	0	19	Slave
0	1	0	0	1	1	20	Slave
0	1	0	1	0	0	21	Slave
0	1	0	1	0	1	22	Slave
0	1	0	1	1	0	23	Slave
0	1	0	1	1	1	24	Slave
0	1	1	0	0	0	25	Slave
0	1	1	0	0	1	26	Slave
0	1	1	0	1	0	27	Slave
0	1	1	0	1	1	28	Slave
0	1	1	1	0	0	29	Slave
0	1	1	1	0	1	30	Slave
0	1	1	1	1	0	31	Slave
0	1	1	1	1	1	32	Slave

If master unit is equipped with wireless handset only, it can only use Global-Control communication method. If it is equipped with wall pad, it can use both communication methods.

## D.2. Open Modbus protocol

Transfer Mode: RTU, BAUD Rate: 9600bps, 8 data bit, 1 stop bit, None parity bit

The communications require a delay between reading an answer and sending the next command of 80ms. All temperature is equal to reading data\*10 accuracy: 0.1 degree C.

### Supported Functions:

Function Code	Function Description
01(01H)	Read Coils
02(02H)	Read Discrete Inputs
03(03H)	Read Holding Registers
04(04H)	Read Input Registers
05(05H)	Write Single Coil
06(06H)	Write Single Register
15(0FH)	Write Multiple Coils
16(10H)	Write Multiple Registers
255(FFH)	Extended Commands which is used to test

### Valid Error code table:

Error code	Description	Definition
01 (01H)	Invalid commands	Received commands beyond valid commands
02 (02H)	Invalid data address	Data addresses beyond valid data address
03 (03H)	Invalid data	Data beyond definition range
04 (04H)	Write data not succeed	Write data not succeed

## E. Control Specifications: SK-NCEF-002 ~W Configuration: Limited function PCB

Used in all PCE2/PCF2 [V/P] **W** unit configurations:

**SK-NCEF-002** is used to PCE2/PCF2 with or without electrical heater.

### E.1. Features:

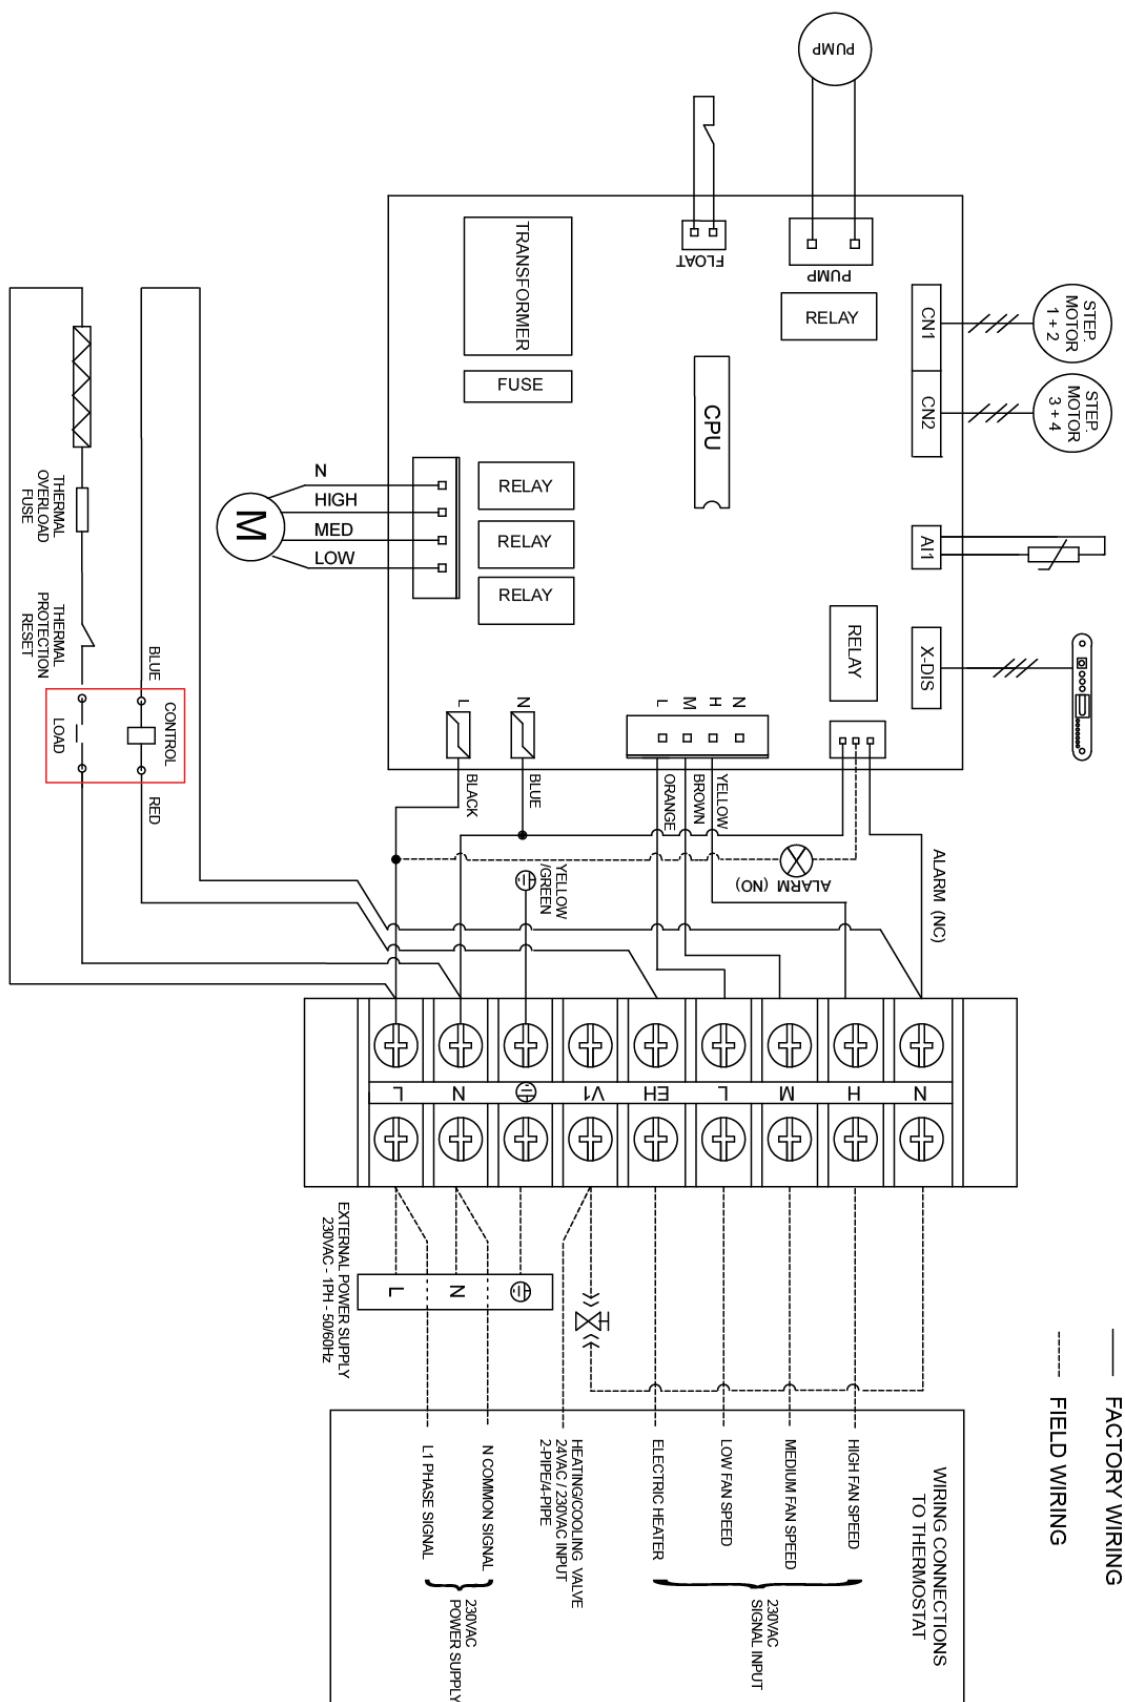

- a. Condensate management with valve protection and NC alarm contact.
- b. Integrated fan relays for zone control applications.
- c. ON/OFF thermostat input and low-voltage modulating fan speed input flexibility.
- d. Simple error diagnostic and LED error display.

### E.2. I/O Port Definitions

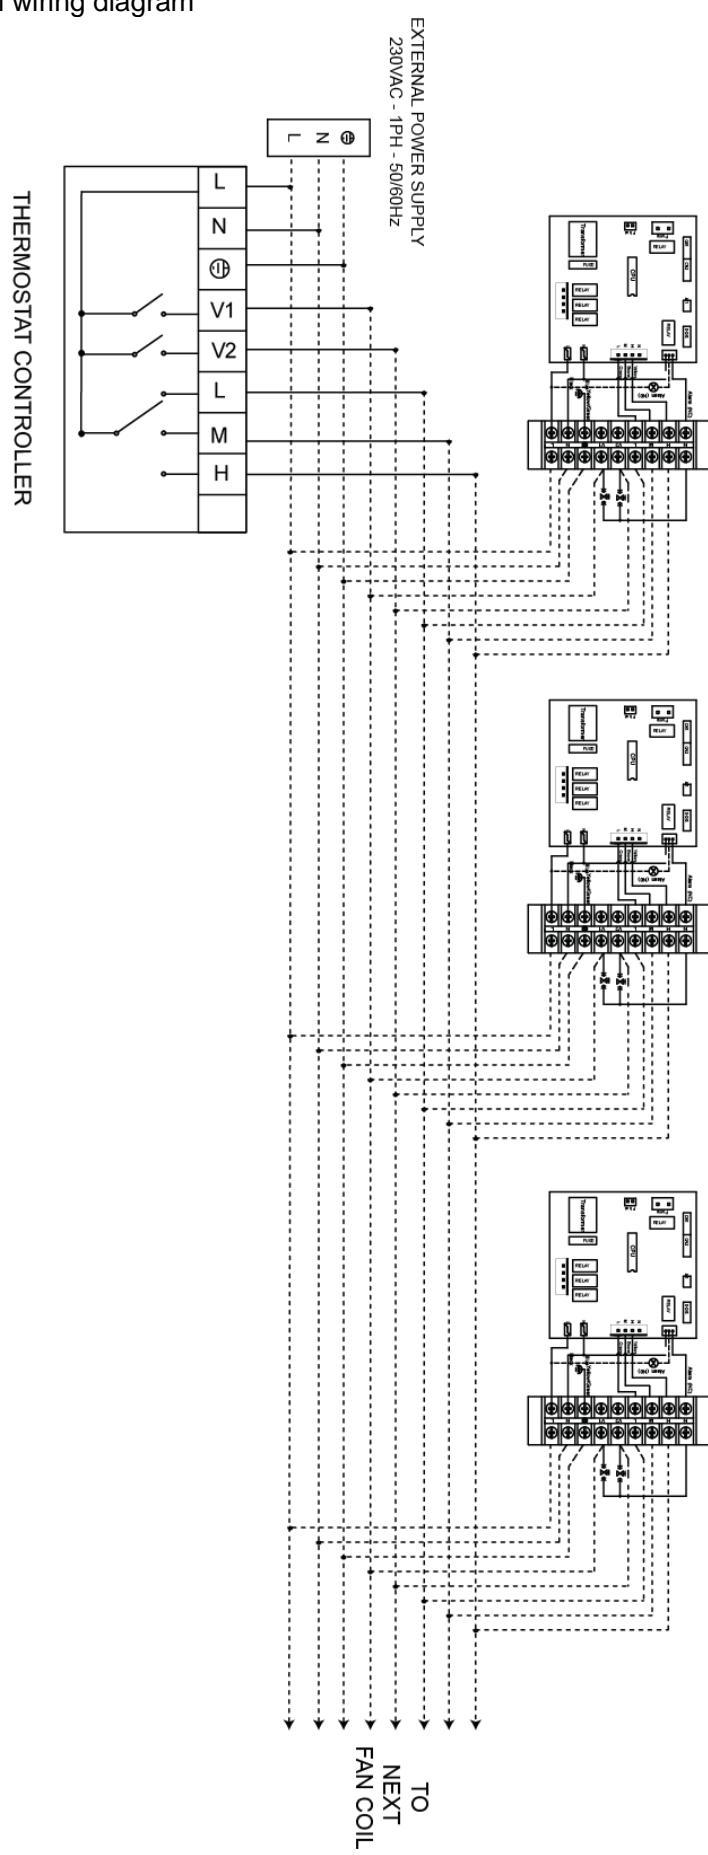

I/O		Code	2-Pipe	4-Pipe	
Analogue input	Coil temperature sensor	AI1	Cooling / heating coil sensor (Ti1)	Cooling only coil sensor (Ti1)	
Voltage input	High fan speed	H	230VAC input signals from wired thermostat		
	Medium fan speed	M			
	Low fan speed	L			
Voltage input	Phase	L	External 230VAC power supply connection to the PCB. Max length: 5 m		
	Neutral	N			
	Earth	GND			
Digital input	Float switch	Float	Voltage-free (NC)		
Voltage output	Water pump	Pump	Voltage output (L)		
Voltage output	High fan speed	H	230VAC outputs for 3-speed AC fan motor		
	Medium fan speed	M			
	Low fan speed	L			
	Neutral	N			
	Stepping motor	CN1-2	Low-voltage signal output		
Digital output	LED display	X-DIS	Low-voltage output		
Voltage-free output	Alarm		Voltage-free alarm contact: (a) Standard configuration is (NC). (b) Optional field-wired configuration is (NO).		

## E.3. Wiring Diagrams

### E.3.1. Standard unit wiring diagram of SK-NCEF-002

### E.3.2. Zone control wiring diagram

## E.4. Control logic specification

### E.4.1. Unit power ON/OFF

- I. The unit is turned ON when any of the fan speed inputs (from thermostat) are ON.
- II. The unit is turned OFF only if all of the fan speed inputs (from thermostat) are OFF.

### E.4.2. Alarm protection and error display

- I. If the float switch is open for 5 minutes, the (NC) voltage-free alarm contact shall be open, the (NO) voltage free alarm contact shall be closed.
- II. LED display reports a condensate management failure (see table below).

### E.4.3. Drain-pump run management

- I. When the unit turns ON:
  - a) If  $T_{i1} < 15^{\circ}\text{C}$ , the drain pump turns ON.
  - b) If  $T_{i1} \geq 15^{\circ}\text{C}$ , the drain pump turns OFF
- II. When the unit turns OFF and the drain pump is ON:  
the drain pump will remain ON for 5 minutes, before the drain pump turns OFF.
- III. At any time:
  - a) If the float switch is OPEN, the drain pump will turn ON.
  - b) If the float switch is OPEN and then CLOSES, the drain pump will remain ON for 5 minutes, and then turns OFF.

### E.4.4. Swing and louver control

- I. When the unit is OFF, the louvers are closed (angle at  $100^{\circ}$  against vertical).
- II. When the unit turns ON, the louvers open (angle at  $87^{\circ}$  against the horizontal).
- III. When the unit turns OFF, the louver returns to a closed position ( $100^{\circ}$  against the vertical).

## E.5. LED Indication and Error Description

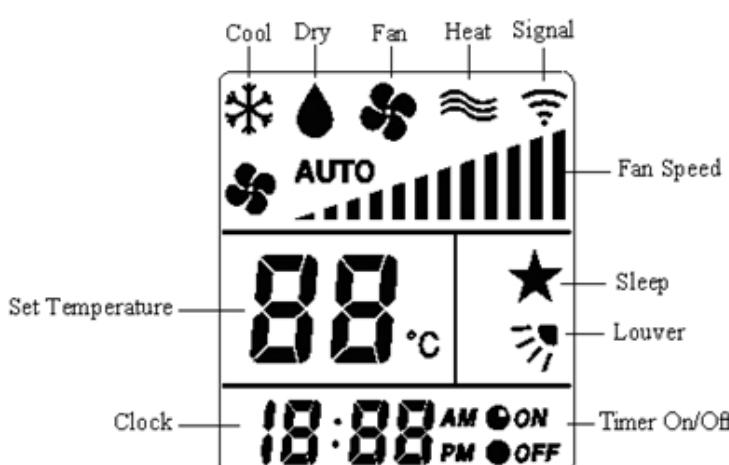

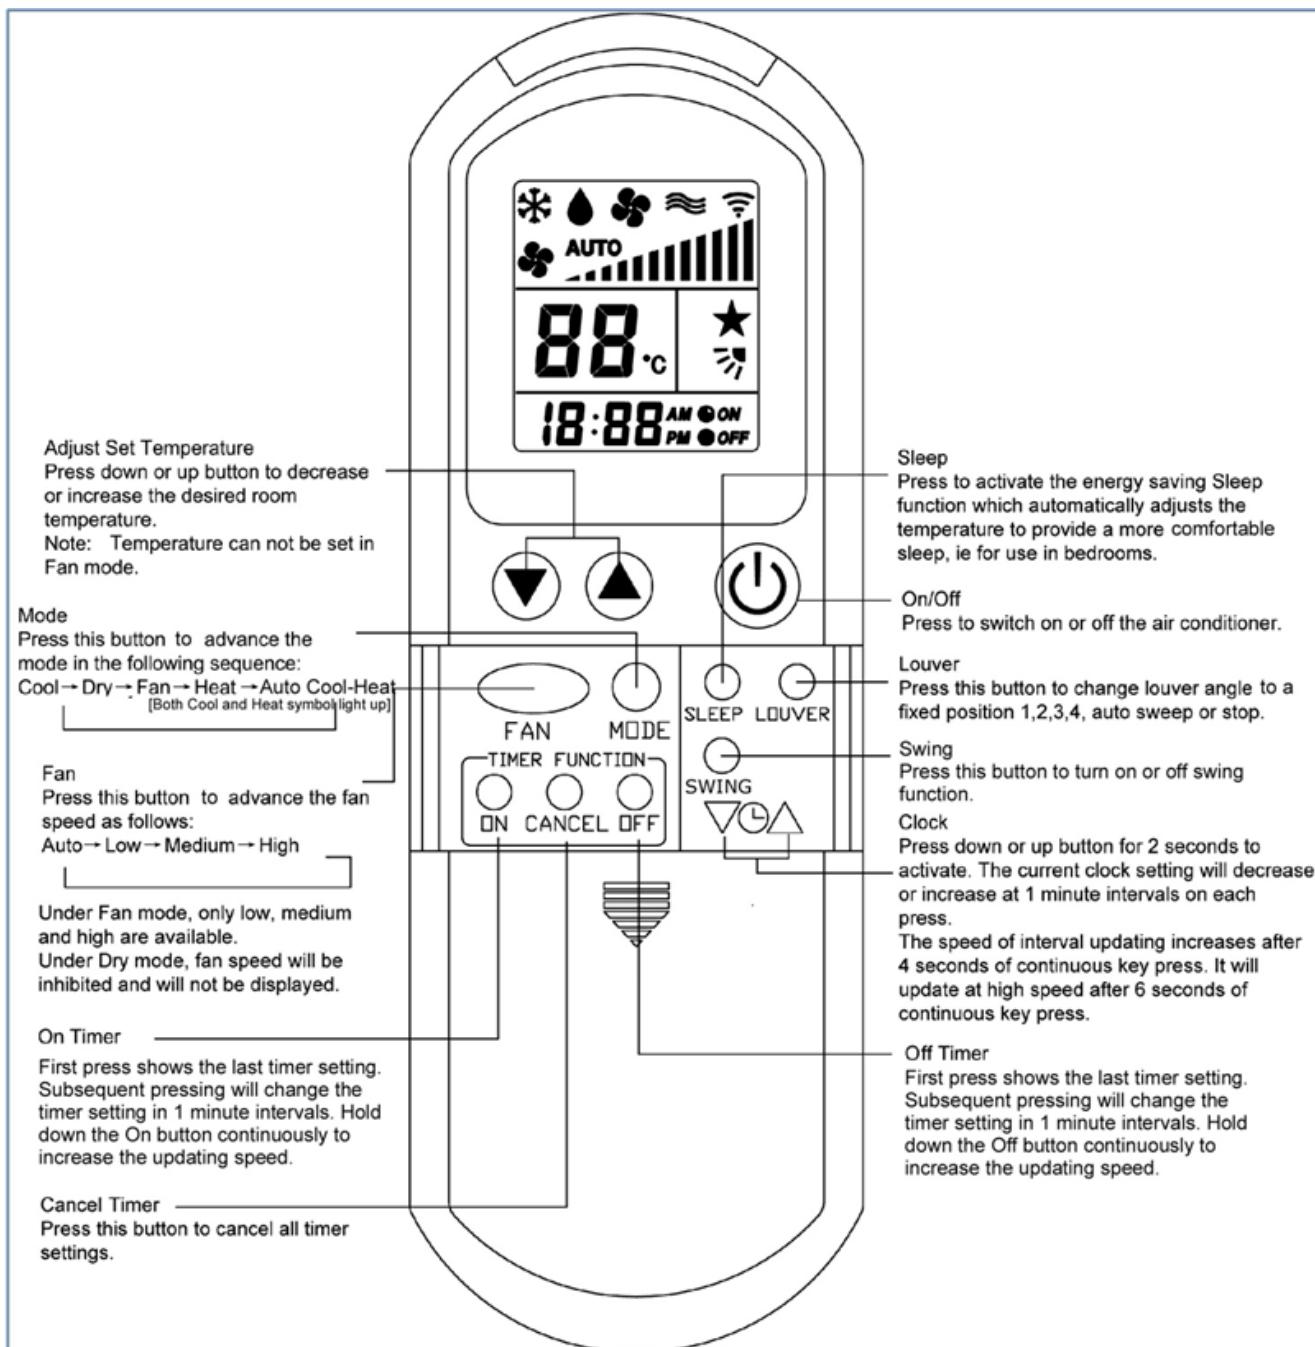

SK-NCEF-002		
Fan speed setting	LED indication	Condition
High speed	Red LED On	Normal
Medial speed	Yellow LED On	Normal
Low speed	Green LED On	Normal

Error Description	LED status			Remedy
	Red	Yellow	Green	
Coil temperature sensor failure	On	Blink	Blink	<ol style="list-style-type: none"> <li>Check Ti1 sensor plug is connected or not.</li> <li>Check sensor's resistance is correct or not.</li> </ol>
Water pump failure	Blink	Blink	Blink	<ol style="list-style-type: none"> <li>Check the condensate water pipe connected or not.</li> <li>Check the pump functioned or not.</li> </ol>

## F. User Interface

### F.1. Remote Handset

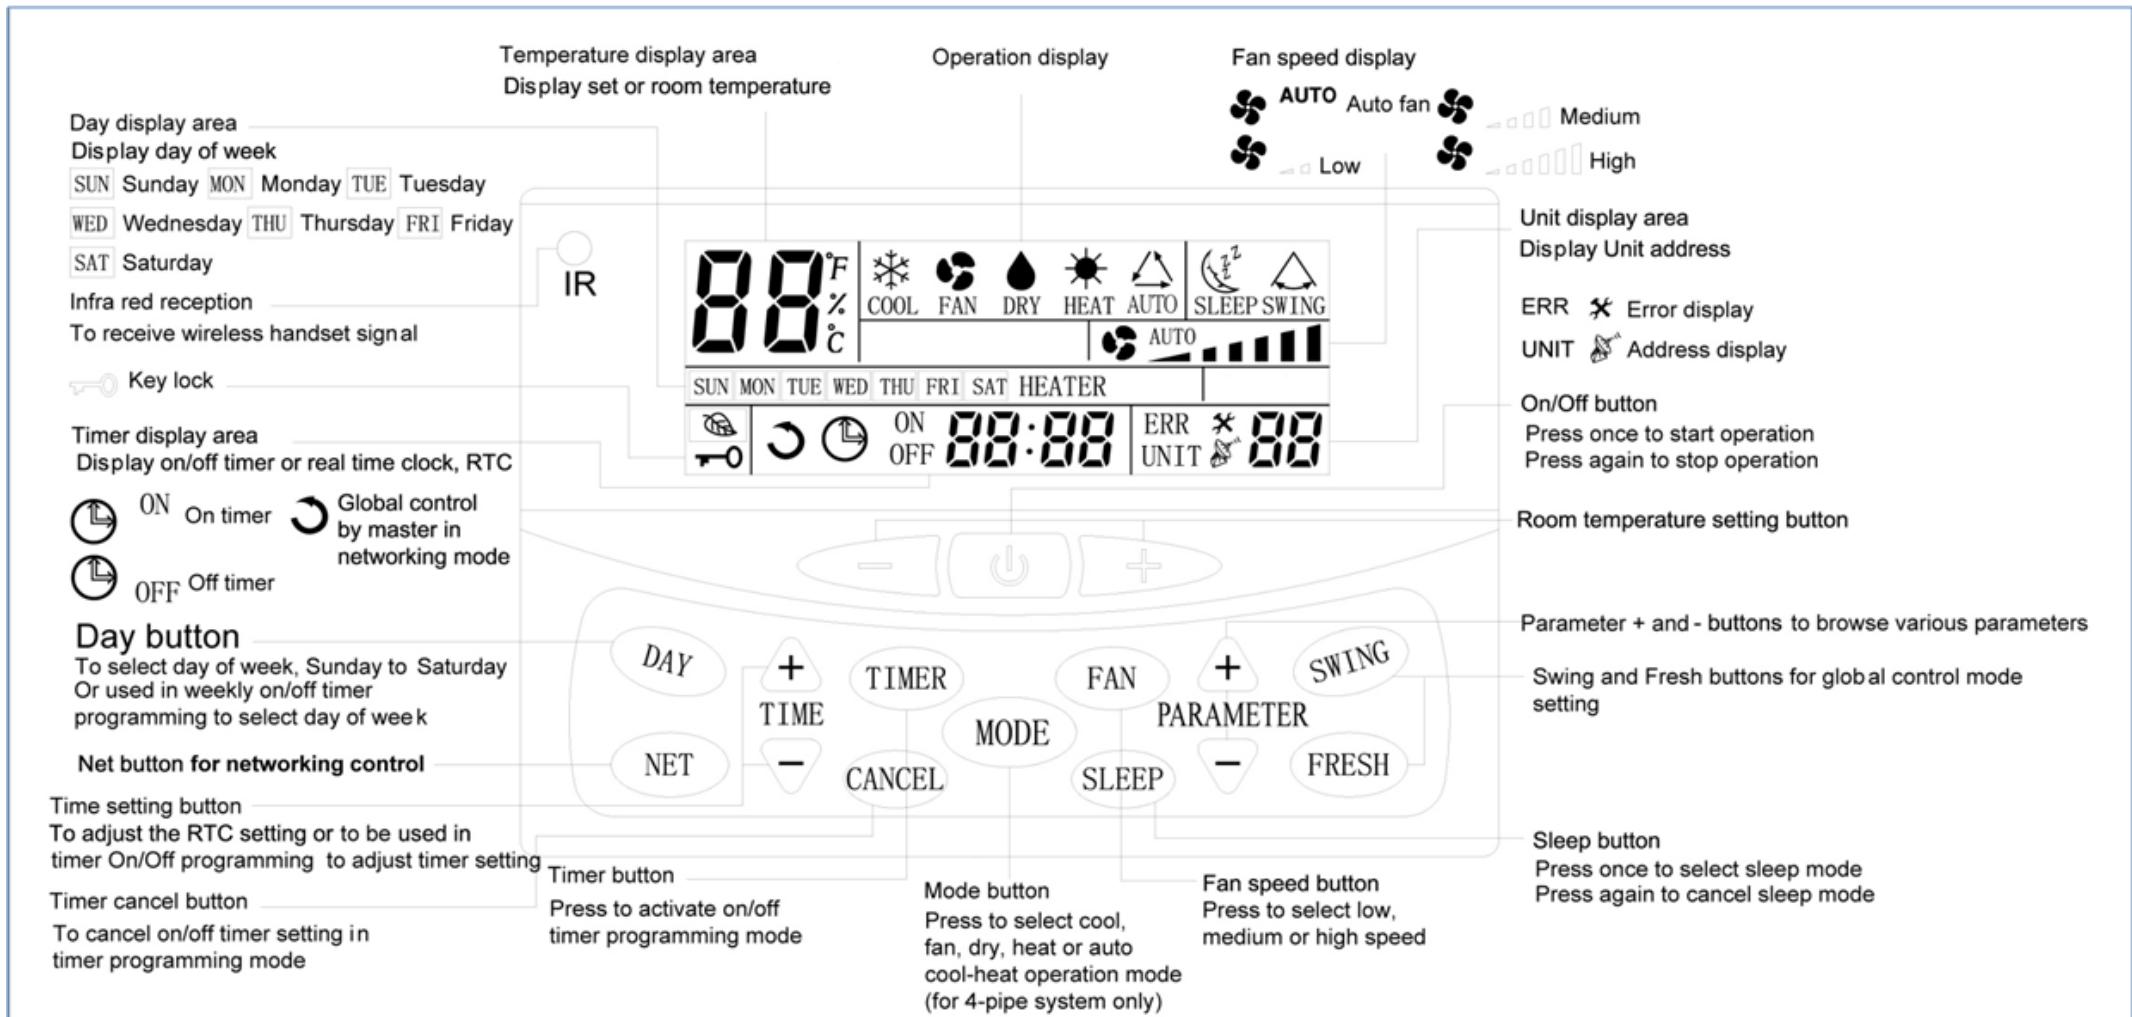

#### Attention

When unit with handset is master, settings are automatically sent to slaves; Auto Cool-Heat operation will be applicable in 4-pipe system only.

Use "Swing" is not applicable.

## F.2. Wired Wall Pad

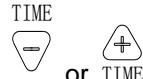

### Attention

- Wall pad will recognize the main board model automatically whether it is 2-pipe or 4-pipe system.
- Auto Cool-Heat operation is applicable in 4-pipe system only.  
When the wall pad is installed wall-pad temperature sensor automatically overrides the default return air sensor (attached to unit return air grille).

## F.2.1. Wall Pad Operation Guidelines

### a) Clock display and setting

System has an accurate internal real time clock used for time indication and timer ON/OFF function. Real

time clock display area indicates internal time clock which can be set by or button.

### b) Day display and setting

The wall pad has day display function which is used for day indication and timer ON/OFF function. Day display icon indicates current day. Press button to set day.

### c) Timer ON/OFF setting

If master unit is in global control mode and on/off timer setting is reached, master unit will command the whole network to be on or off. Otherwise timer on/off is effective to the local unit only. The system supports 7 days on/off timer setting.

- Press button once, and symbol blinking indicates on timer programming mode, day display area indicates the day for setting timer on. If on timer for this day is null, timer display area shows , otherwise the on timer setting will be shown. Press or button to change the on timer setting. Press key to cancel the current on timer selected and the timer display area will show . Press button to change the day the on timer is to be programmed.
- Press button again, and symbol blinking indicates off timer programming mode. The setting method is the same as on timer setting above.
- Press button again, to exit timer on/off setting function.
- Should there be any on or off timer being programmed, will light up. Should there be any unexecuted on or off timer for the current day, its corresponding or icon will light up.
- Hold down button for 3 seconds to cancel all timer settings.

### d) Timer set by master unit is as follows:

- Press button to enter into networking control mode. Unit area blinking indicates the slave unit under control. Press or to select the desired slave unit. Units that are off will be skipped automatically.
- Press button once to enter into on timer programming mode. Press button to select the required day of the week. Master unit will then retrieve the setting from the selected slave unit and timer display area will show "rEAd". The on timer setting will be shown upon reading the data successfully. Press or button to change the on timer setting.

- Press  button again to enter into off timer programming mode. Press  button to select the required day of the week. Master unit will then retrieve the setting from the selected slave unit and timer display area will show "rEAd". The off timer setting will be shown upon reading the data

 successfully. Press  or  button to change the off timer setting.

- Upon completion of changing timer settings for the selected day, press  button again to exit timer programming mode. The settings will then upload to the selected slave unit. The next day of the week settings can be done only upon completion of sending data to the slave units. (Repeat steps 1~4 if setting is required for the next day of the week).
- In Global control mode:
  - Pressing Master  button for 3 seconds will cancel all timer settings in all slave units.
  - Timer settings will be broadcast to all slave units.

#### e) Clock synchronization by master unit is as follows:

 and   
Press  and  buttons for 3 seconds to activate clock synchronization to all slave units. Master wall pad will respond with a beeping sound.

#### f) Key lock

In order to prevent unauthorized access to the system setting, a key lock function is provided to prevent mischief. Hold down  and  for 3 seconds to activate key lock,  symbol lights up. Repeat the same to exit key lock. Only  button is applicable in key lock mode.

#### g) Swing

Press  to activate or deactivate swing function.

#### h) Sleep

Press  button to activate or deactivate sleep setting. Sleep is valid in cool or heat modes only.

#### i) Temperature setting

Press  or  to enter into temperature setting mode, temperature display area blinks indicating the current set temperature. Press the above buttons to adjust the set temperature.

#### j) Mode setting

Press  button to change the operation mode.

#### k) Fan speed setting

Press  button to change the fan speed. Only low speed is available for dehumidification mode.

## I) On/Off control

Press  to start or stop the air conditioner.

## m) Networking Master - Slave Control (only master unit wall pad can control other units on the network)

- Press  button to enter into networking control mode. Unit area blinking indicates the slave unit under control. Press  or  to select the desired slave unit; Units that are off will be bypassed automatically. Parameters that can be controlled are on/off, timer weekly program, set temperature, mode, fan speed, swing and sleep. Parameter operation methods are the same as above. Press  button again to exit networking control mode.
- Hold down  and  buttons for 3 seconds to enter into global control mode,  lights up. Repeat the same to exit global control mode. In global control mode, the settings of the master unit will be broadcast to all the slave units.

## n) Unit operation parameters browsing

Hold down  and  buttons for 3 seconds to enter into operation parameters browsing mode. Unit display area shows the slave unit under browsing. Slave unit selection method is the same as in

networking control above. Press  HUMIDIFY or  to browse various parameters as follow:

Wall pad display temperature area	Wall pad display time area
C0	Return air temperature displayed
C1	Indoor coil temperature displayed
C2	DIP switch setting displayed
C3	Indoor coil 2 temperature

Press  button to exit.

## o) Error indication

When faulty slave unit is detected, Master unit display area shows the faulty unit address, time area shows the error code and wall pad backlight changes to red color. Should there be multiple units having problems, addresses and error codes will be shown one after another.

Error code definition:

Error	Error code
Electrical heater faulty	E1
Indoor coil sensor 2 faulty	E2
Return air sensor faulty	E3
Indoor coil sensor 1 faulty	E4
Indoor coil low temperature protection	E5
Indoor coil over heat protection	E6
Float switch alarm	E7
Local communication error	E8

## G. Sensor Resistance R-T Conversion Table

Resistance :  $R(25^{\circ}\text{C}) = 10\text{K}\Omega \pm 1\%$

Beta Constant :  $B(25/85) = 3977 \pm 1\%$

T (°C)	Rmin (KΩ)	Rnom (KΩ)	Rmax (KΩ)	T (°C)	Rmin (KΩ)	Rnom (KΩ)	Rmax (KΩ)

## H. Troubleshooting

Symptoms	Cause	Remedy
The fan coil does not start up	No voltage Mains switch in the “OFF” position Faulty room control Faulty fan	- Check for presence of voltage - Place in the “ON” position - Check the room control - Check fan motor
Insufficient output	Filter clogged Air flow obstructed Room control regulation Incorrect water temperature Air present	- Clean the filter - Remove obstacles - Check the room air sensor - Check the water source - Check the air vent
Noise and vibrations	Contact between metal parts Loose screws	- Check for loosening parts - Tighten screws
